Meet Admin 2.0

Admin in your browser: the desktop, Admin Classic, and Admin 2.0 with its assistant

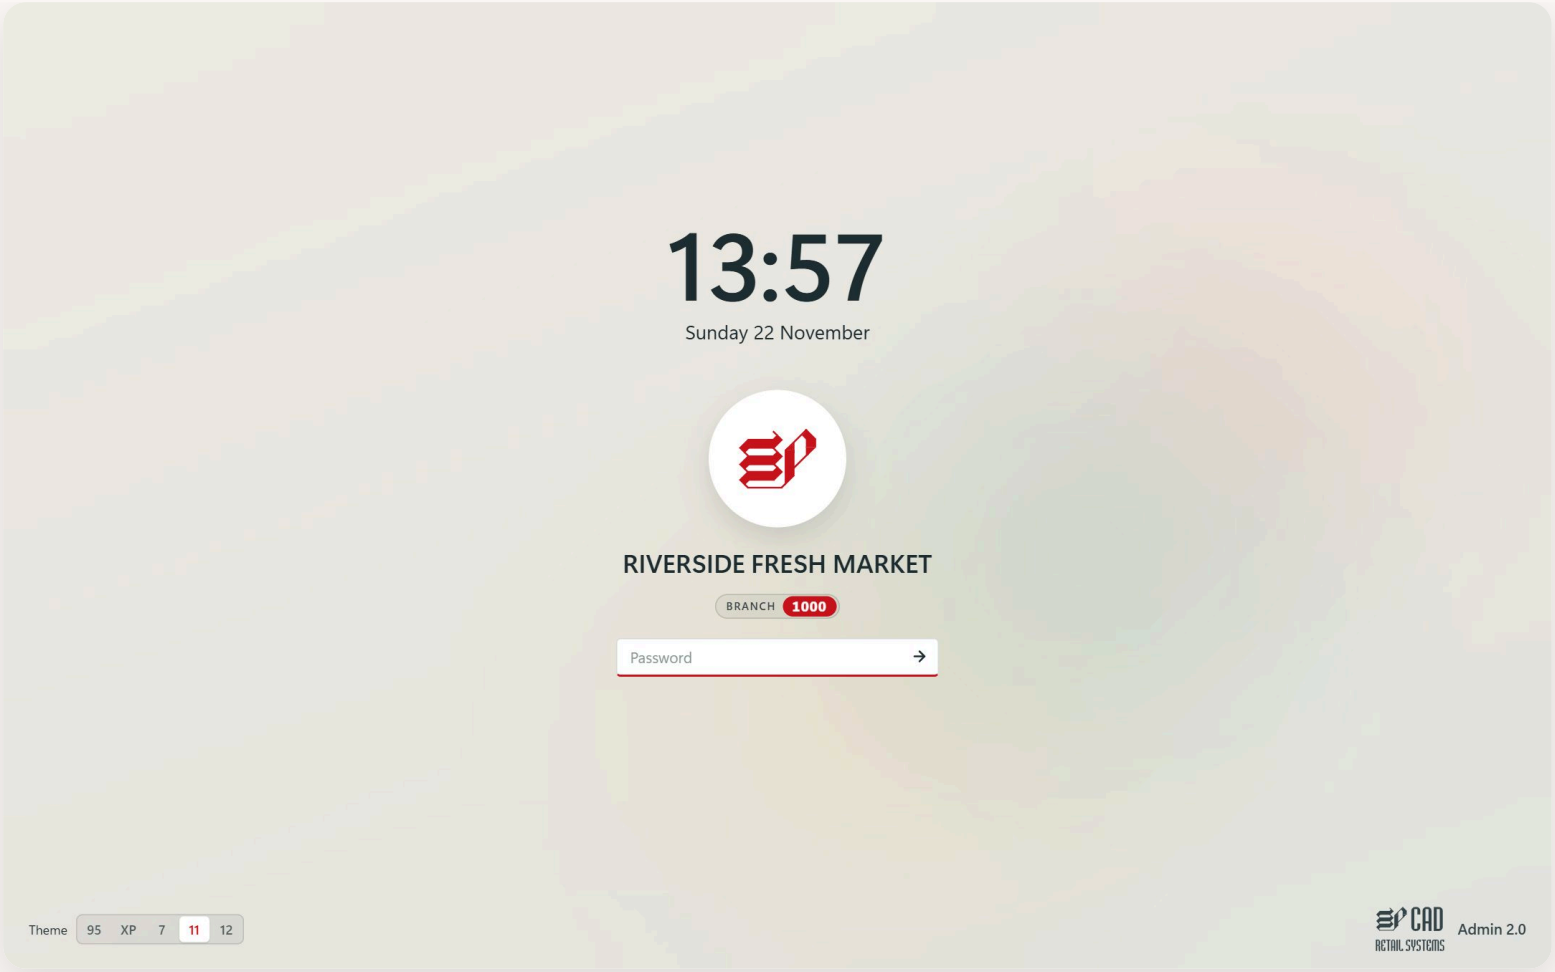

22 November 2026 · Screens use fictitious demo data (Riverside Fresh Market)

CAD Retail Systems

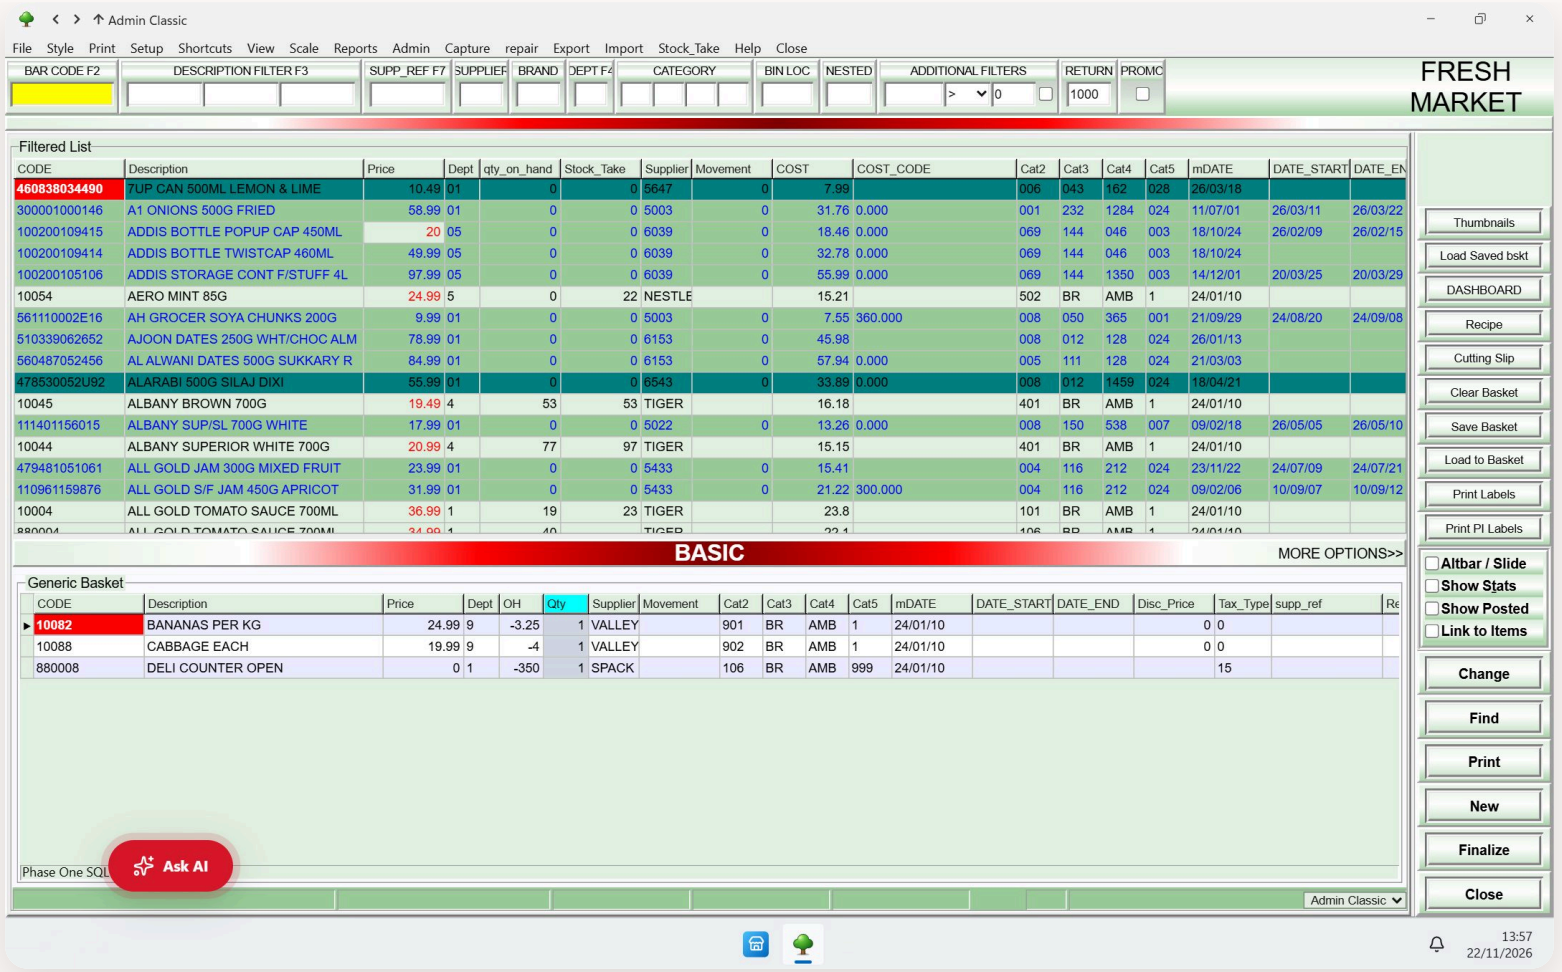

01 Sign in

Open the address, type your password, and you're at work.

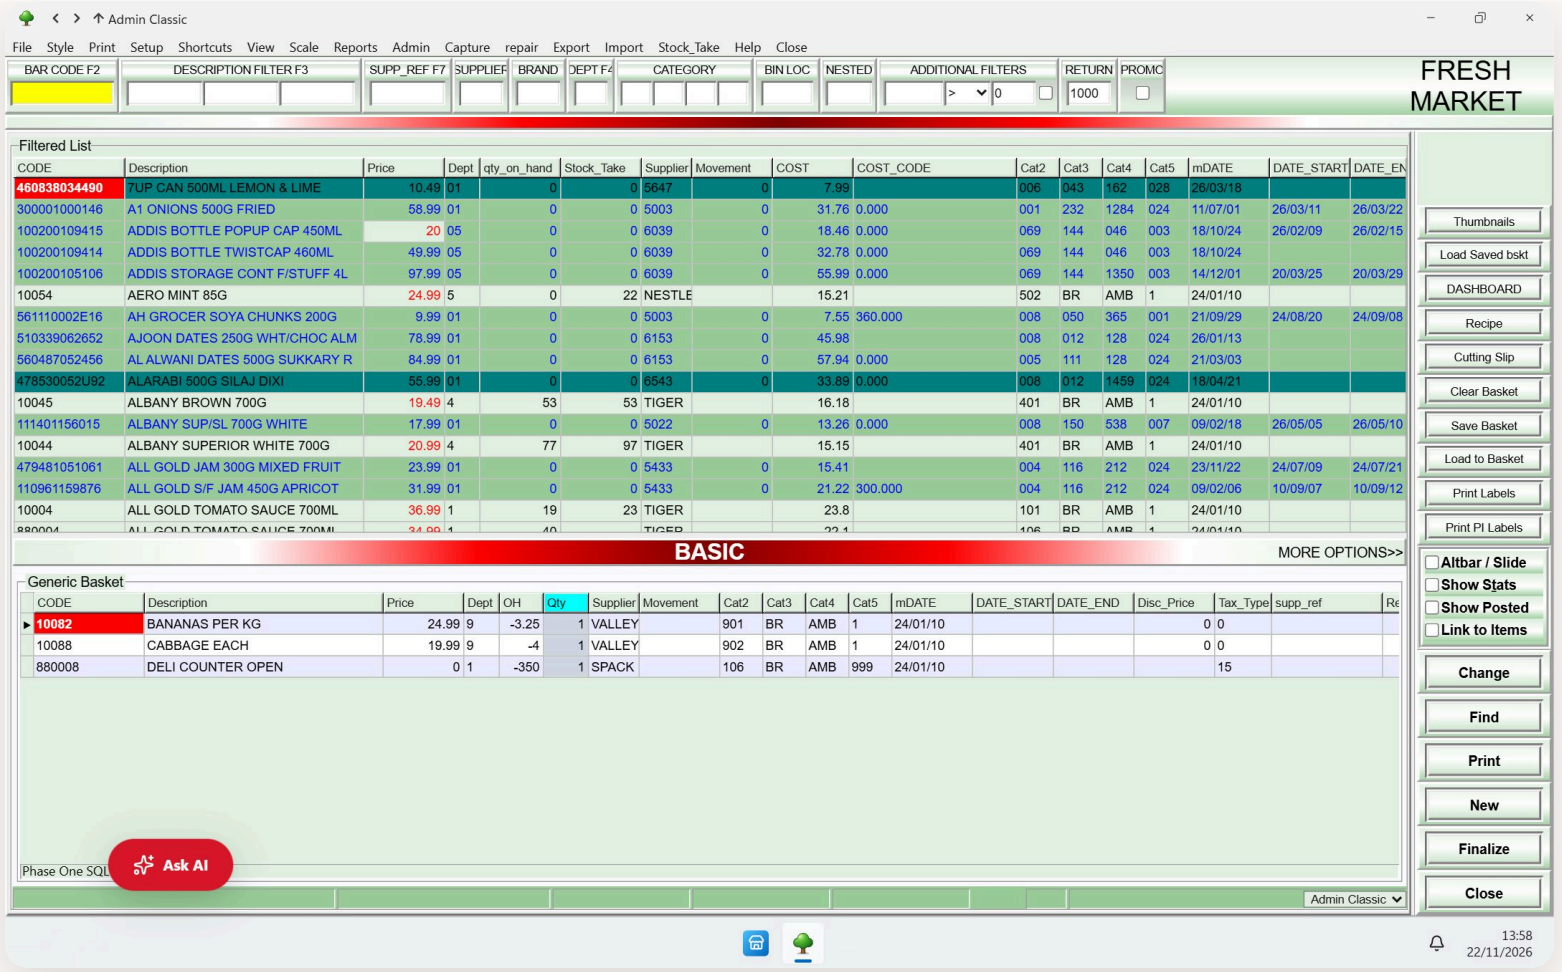

02 A desktop

And it feels like a desktop, because it is one. Your programs sit on it, ready to open.

03 Side by side

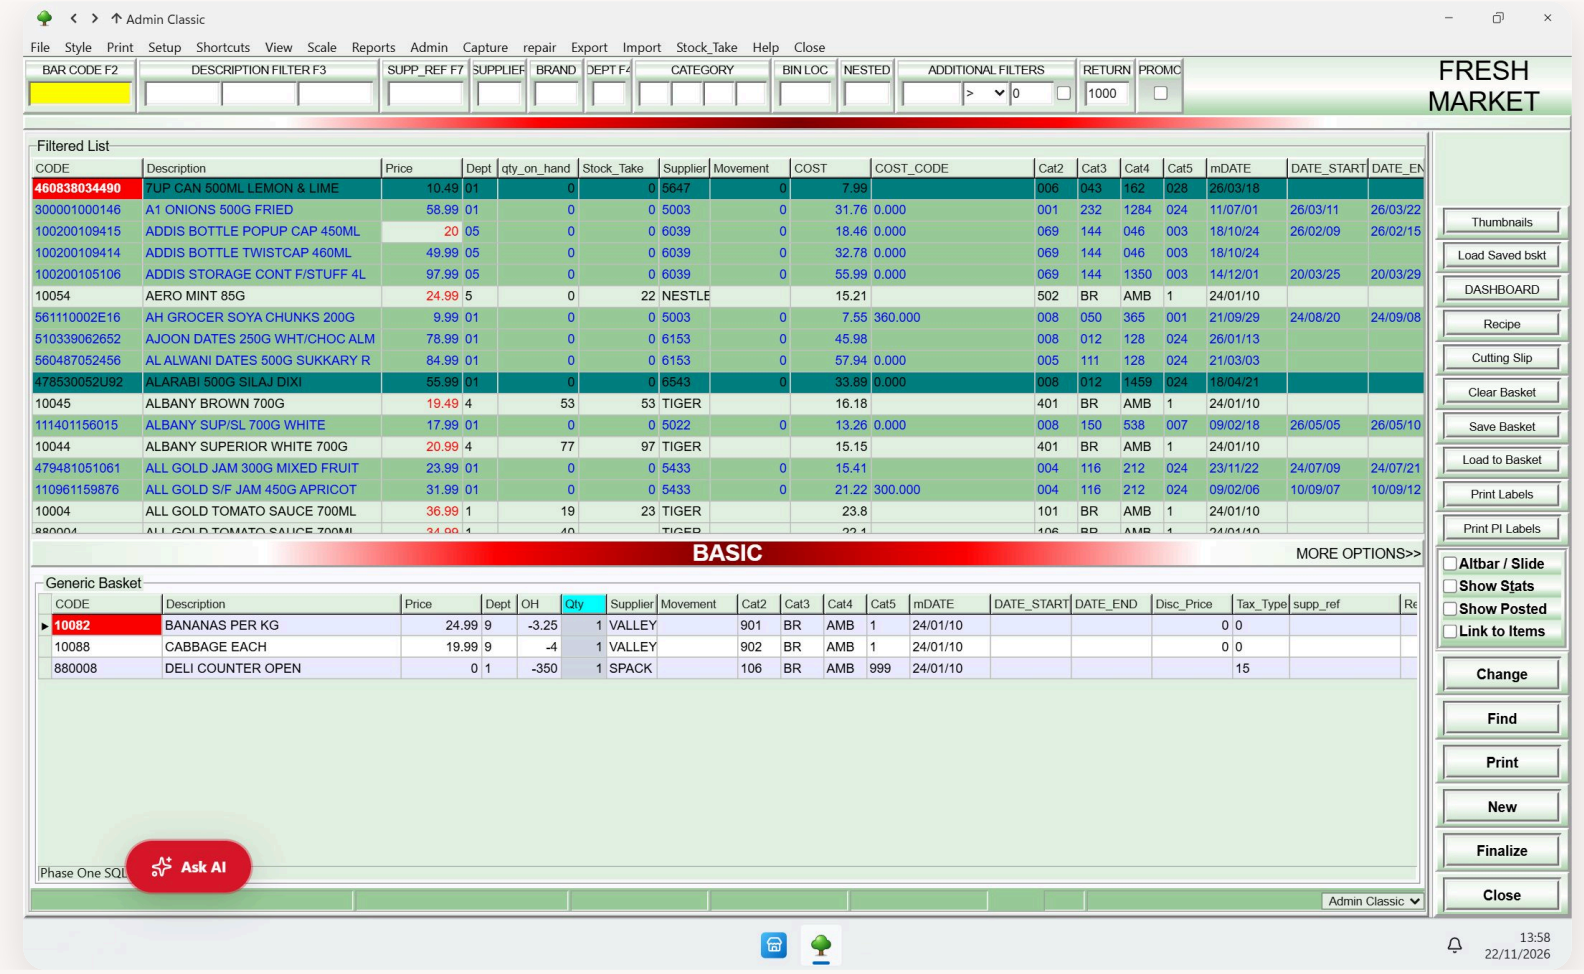

Windows move, snap side by side, and switch from the taskbar. Admin Classic on one side, Admin 2.0 on the other, and one set of books underneath.

04 Admin Classic

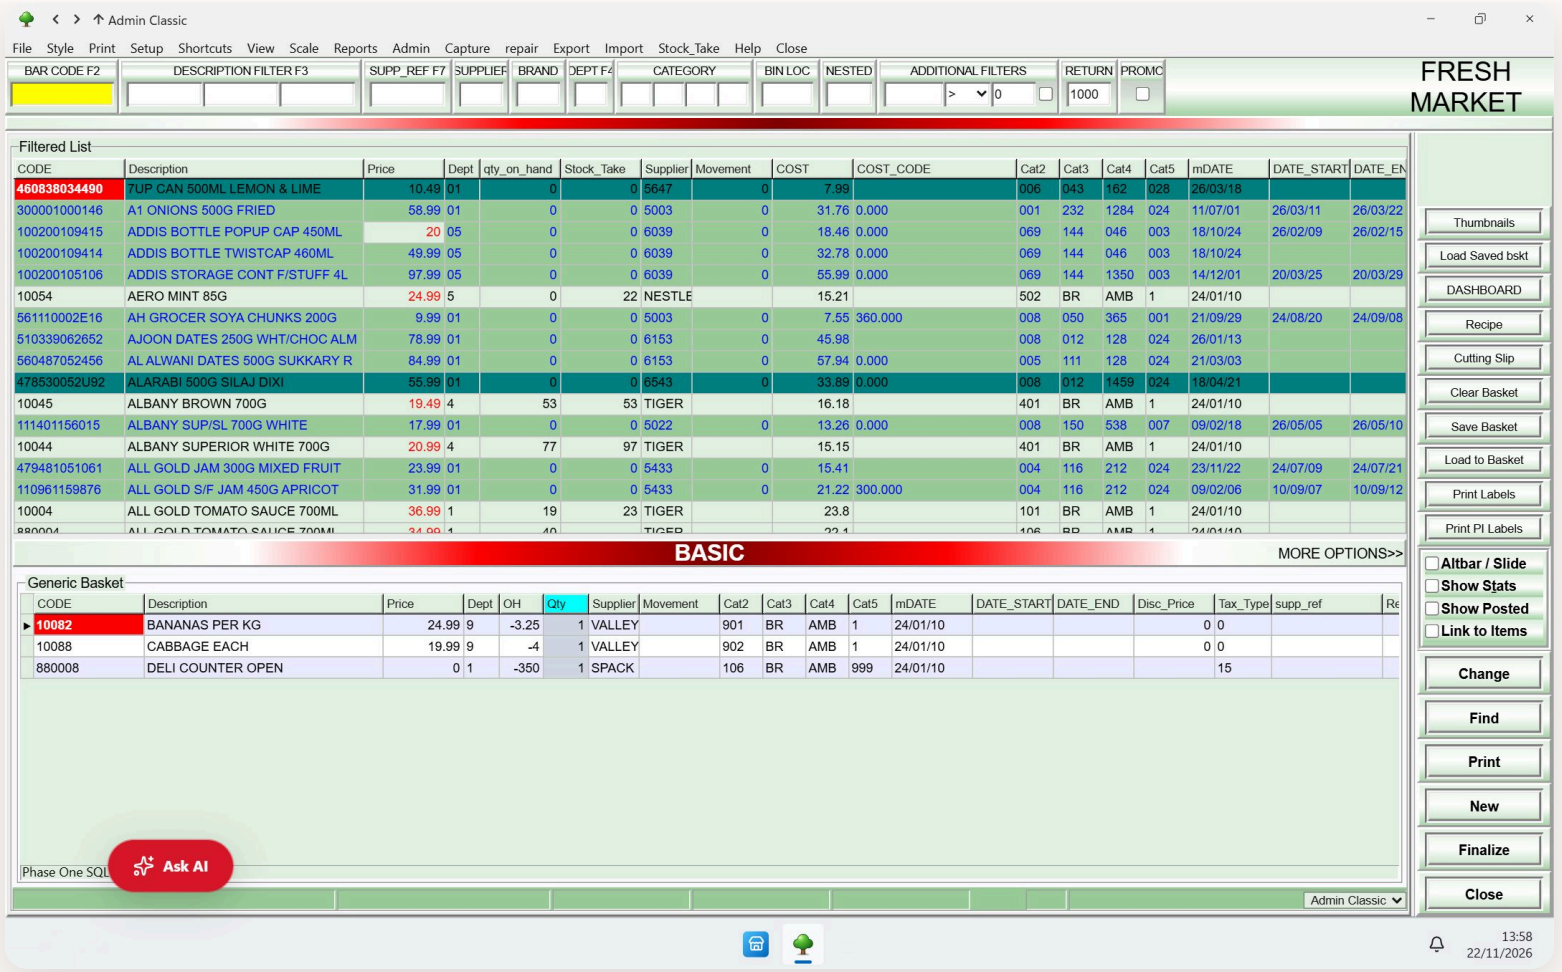

If you know Admin, you know Admin Classic. Everything you love and expect: the same screens, the same keys, the same reports. Now in a browser.

> **Your look.** And it wears the look you like, from the Windows you grew up with, to the one you use today.

05 Your muscle memory

Your muscle memory comes with you. And right beside it, something new.

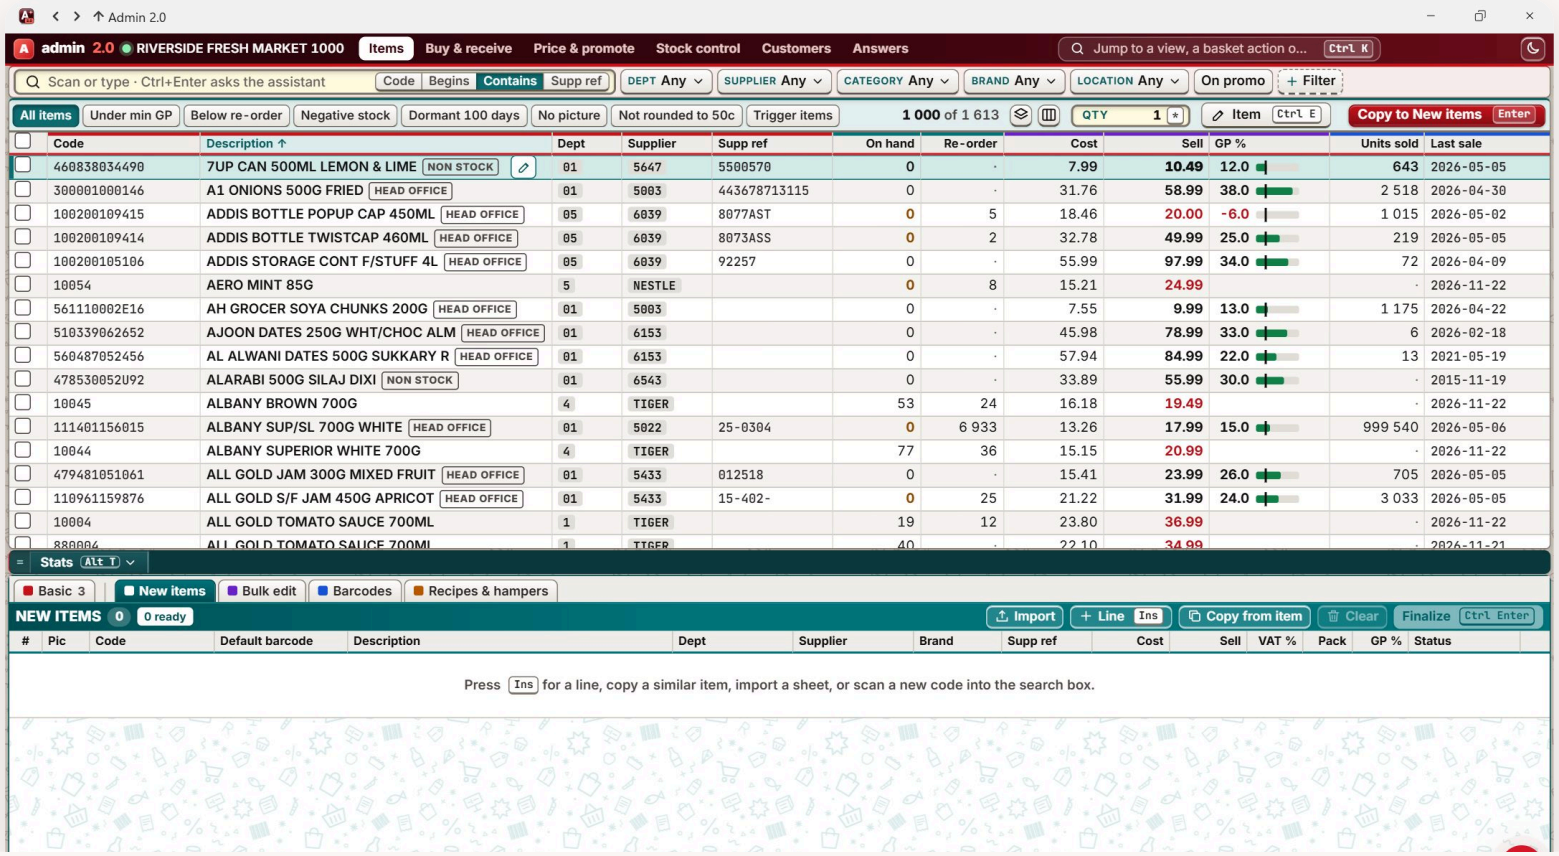

06 Three bands

Every screen reads the same way. What you're looking for at the top. What you found in the middle. What you're working on at the bottom. And an assistant, a click or a word away.

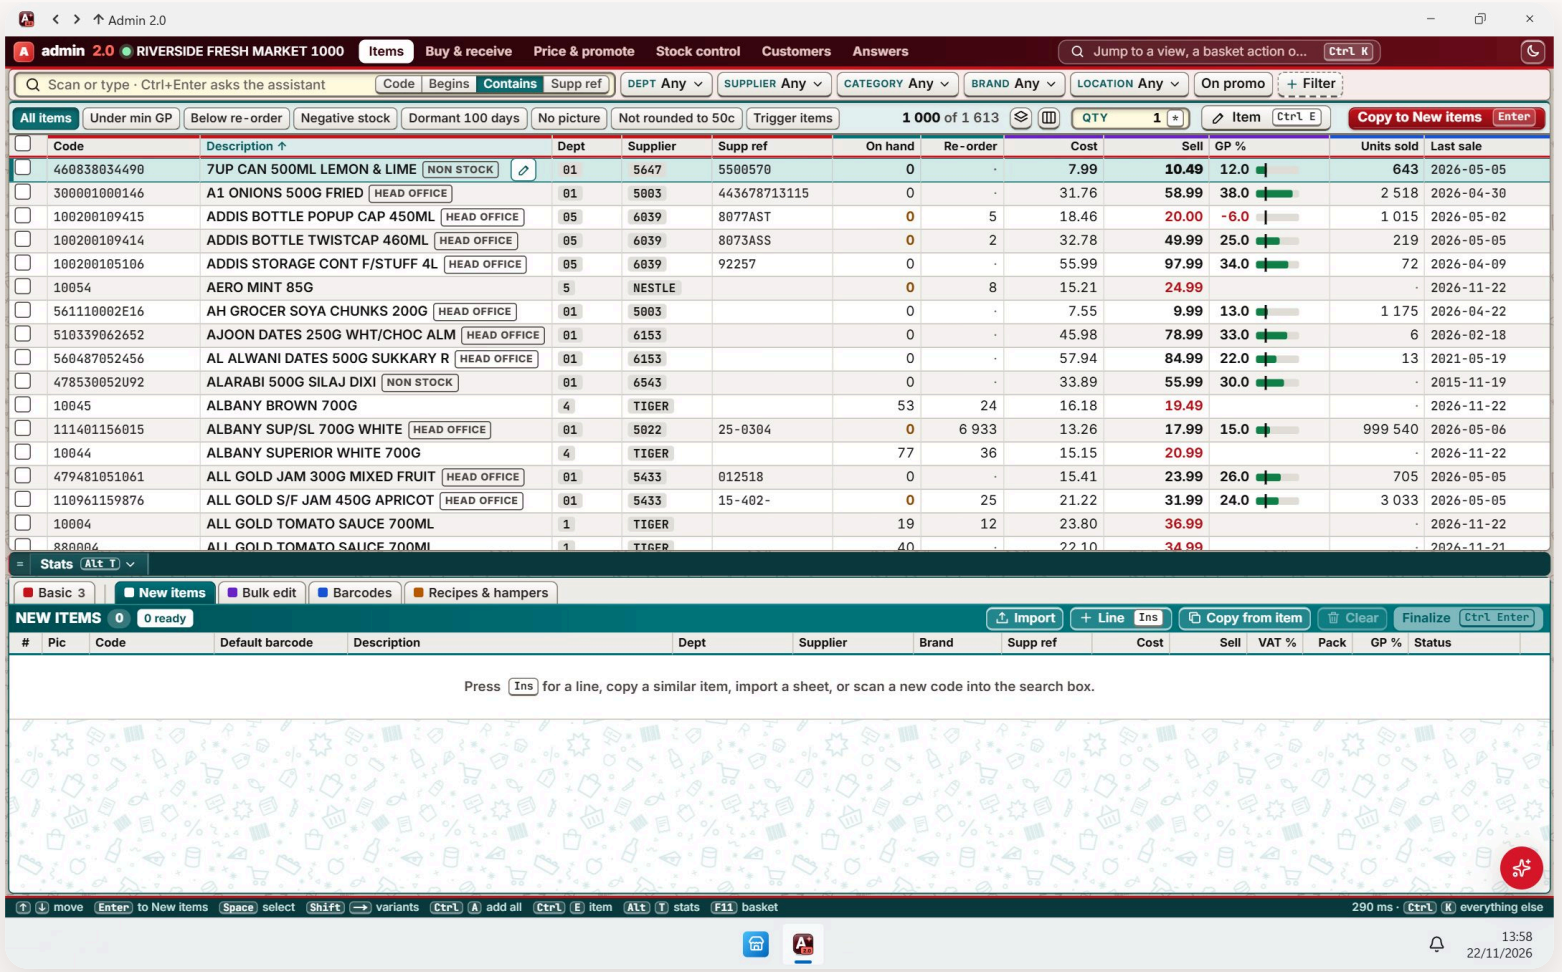

Admin 2.0. Admin 2.0 is laid out around the work, not the menus.

Workspaces. Items, buying, pricing, answers. One key takes you to each.

07 Many at once

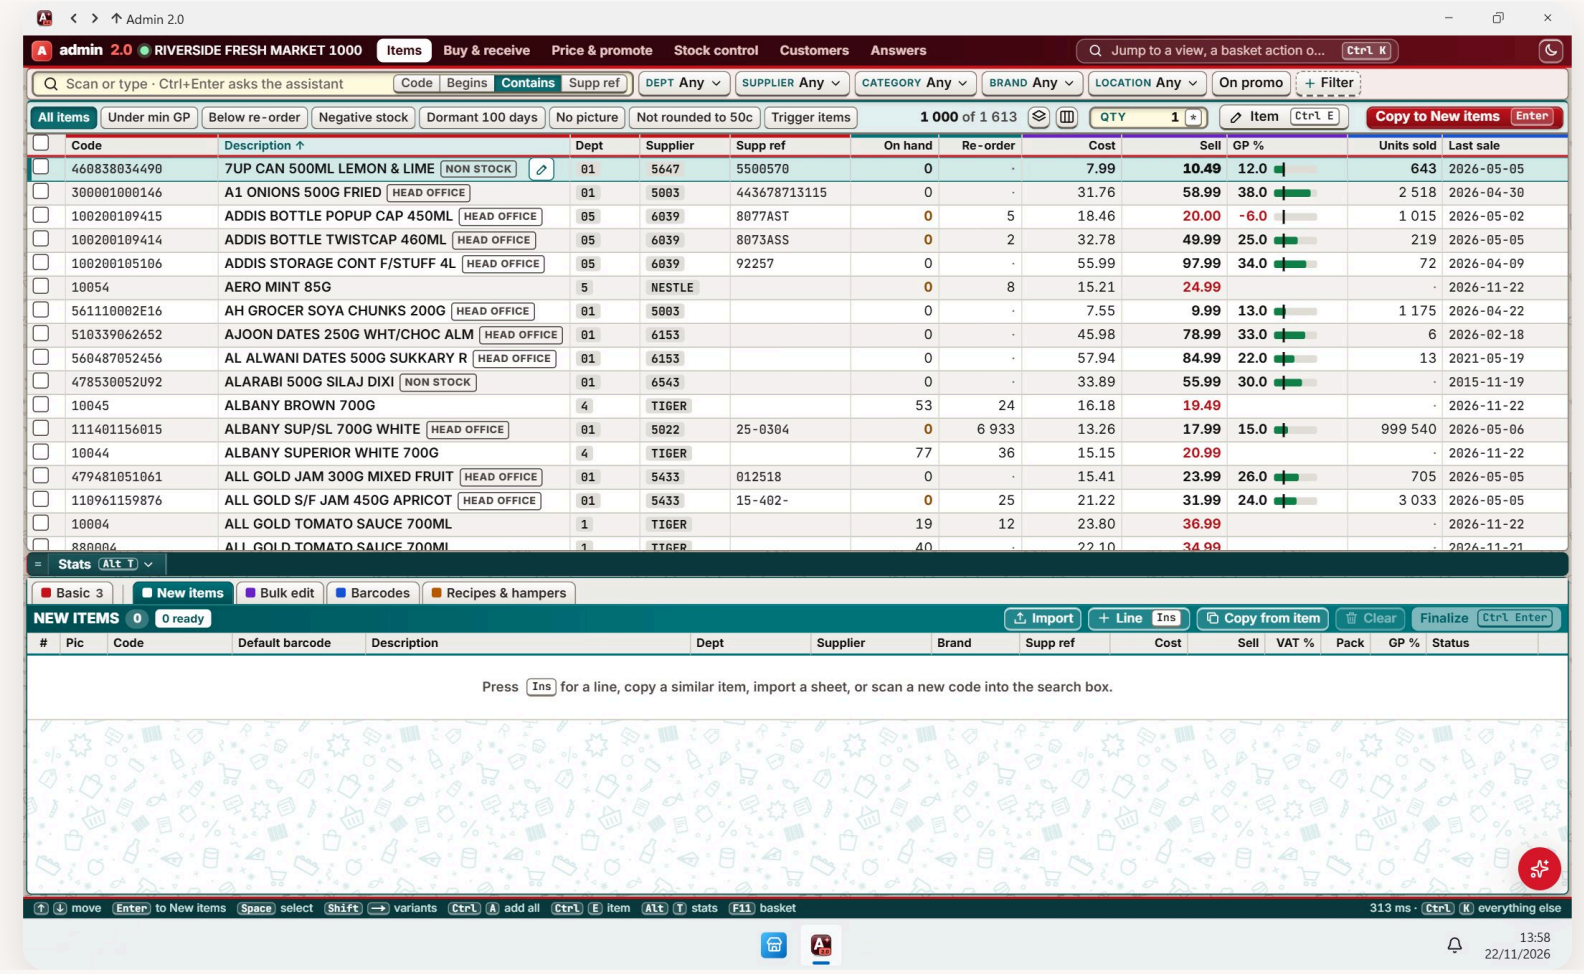

Pick one item, or thirty. Shift for a range, Control for one more: the way your spreadsheet already works.

08 Basic goes anywhere

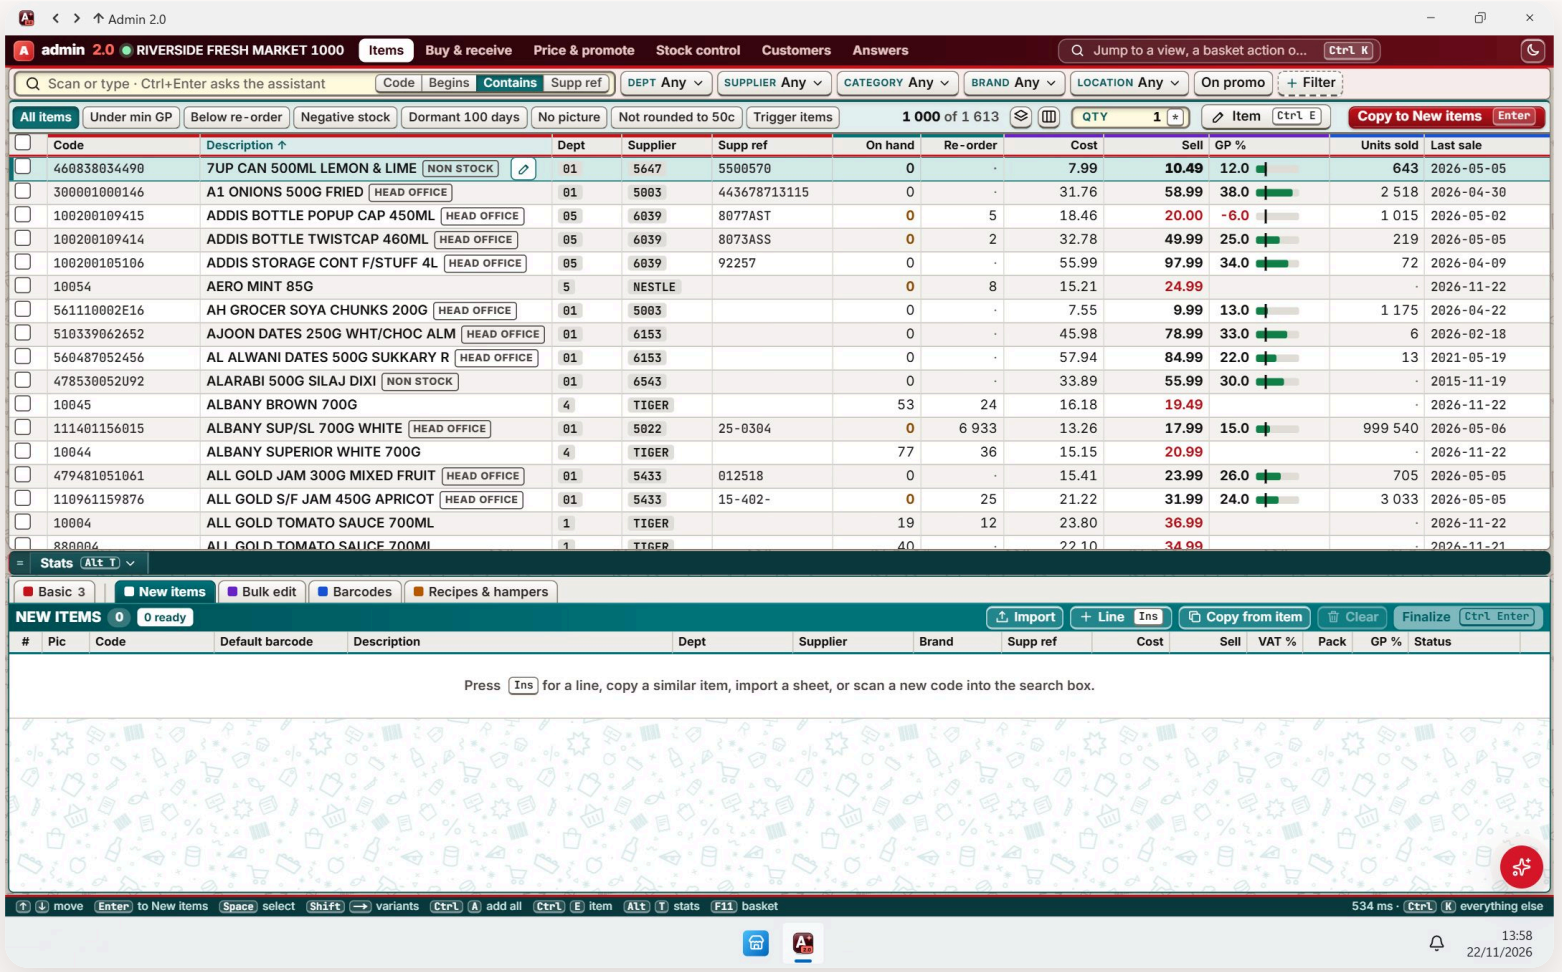

The Basic basket is your working pile. Pick it up and drop it wherever the work is: on a bulk edit, an order, a price change, labels. The items follow, and nothing is retyped.

> **Drag them in.** Then drag them where they need to go.

09 Families

Products that come in flavours or sizes, you link by dragging one onto another. Violet makes a family, green adds to one, red takes one out.

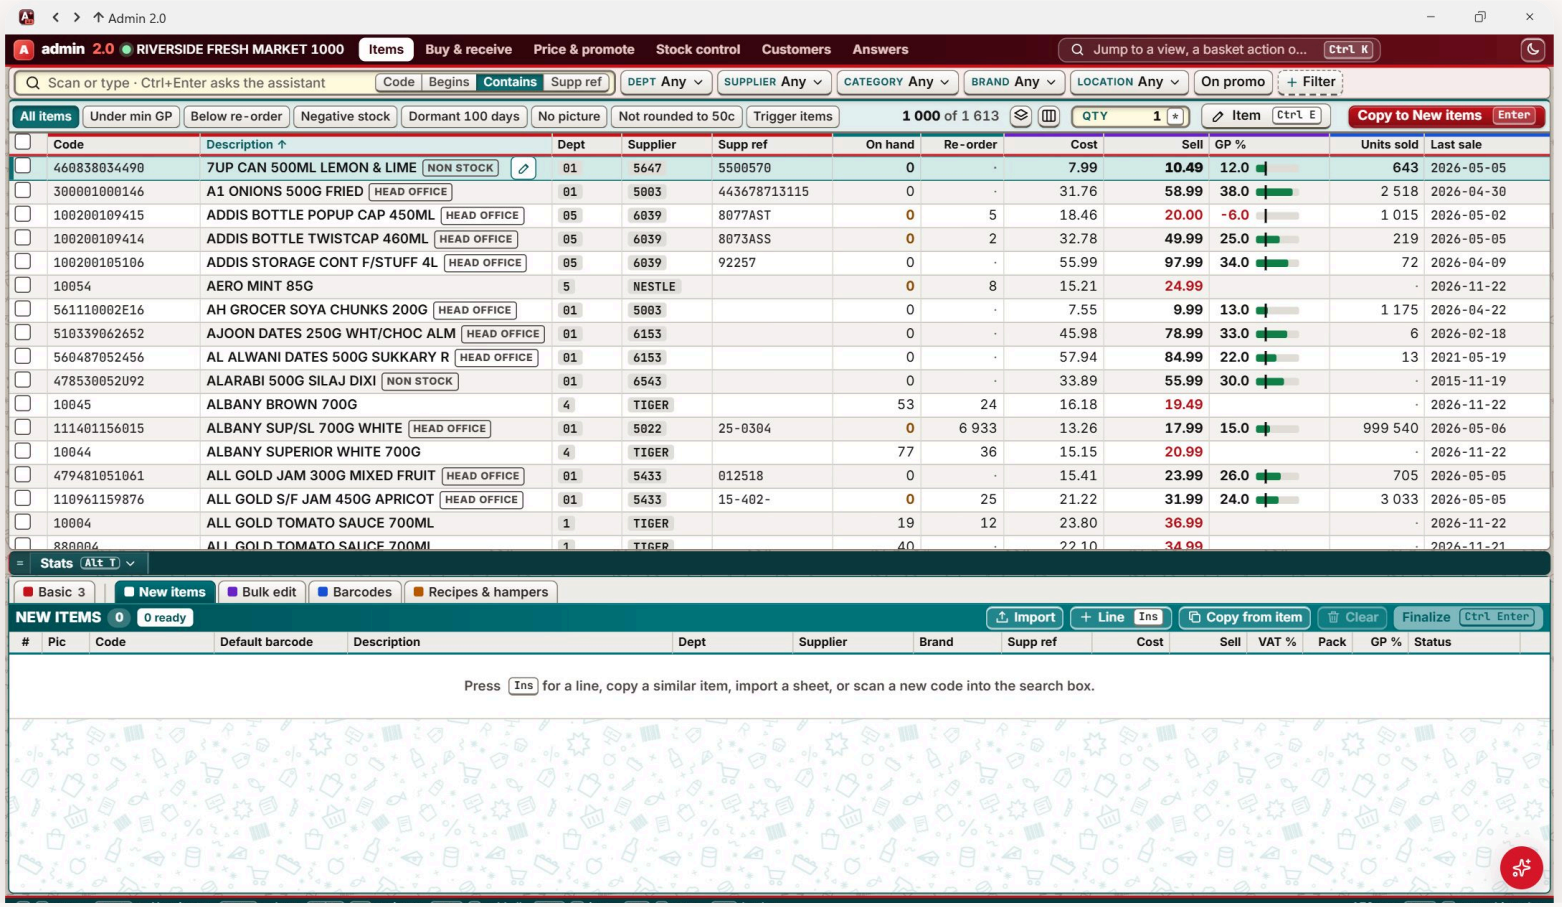

10 Just say it

Or just say it. The assistant filters the list and fills the basket, and shows you what it did.

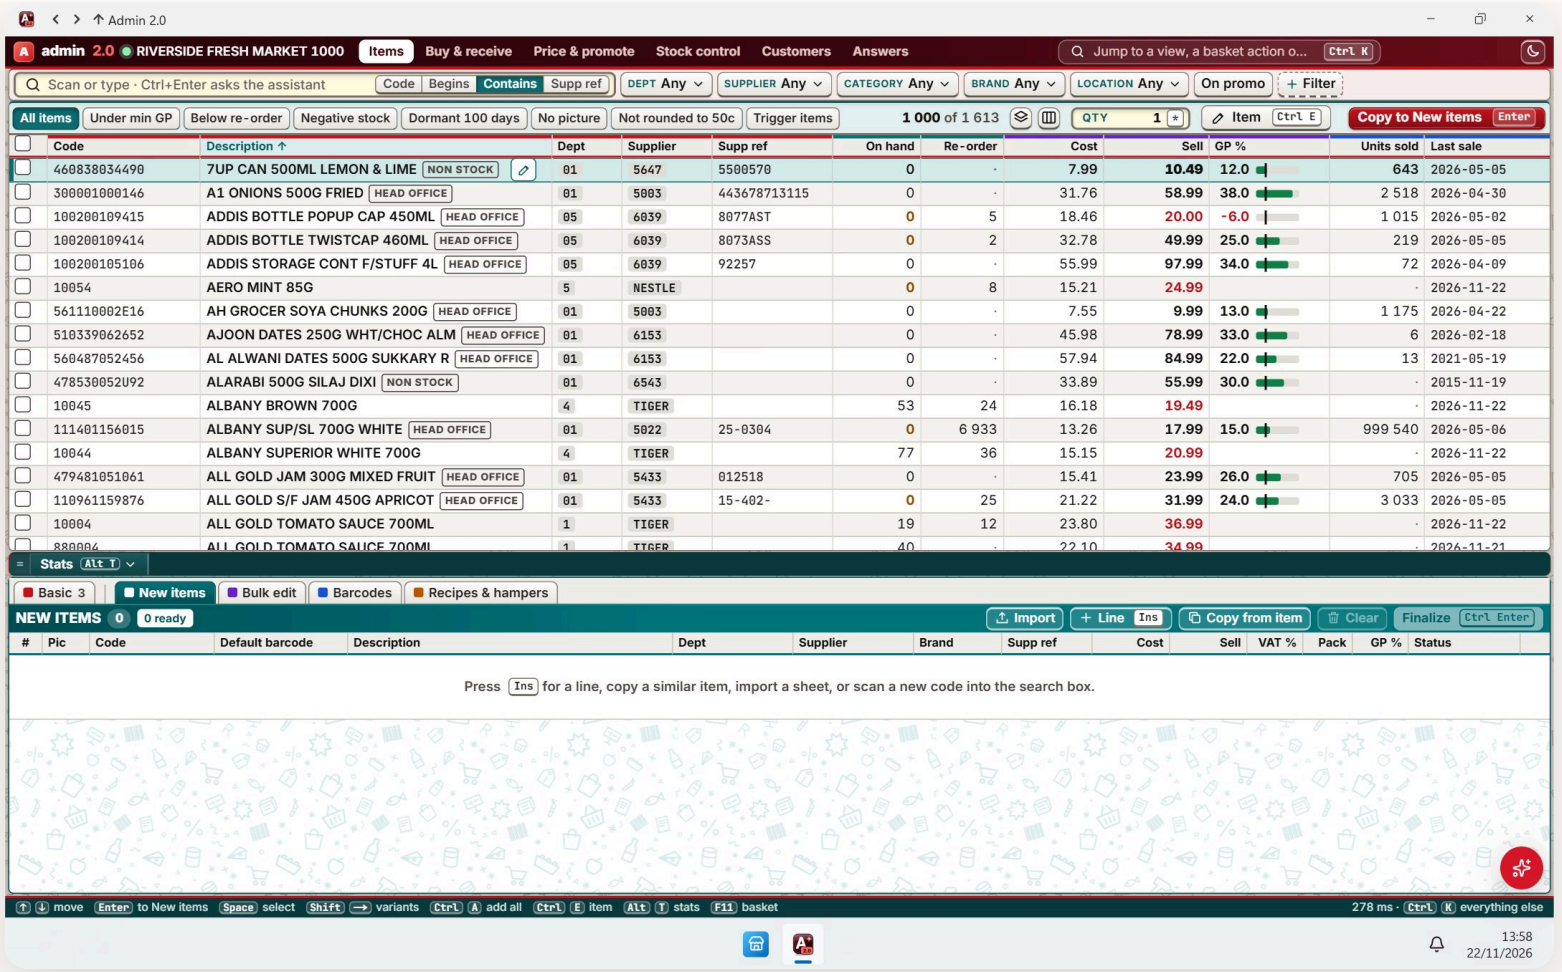

As one. Then the family moves as one. Fold it to a single line, open it again, or drag all six into a basket in one go.

The jobs, at a glance. Now the everyday jobs, at a glance.

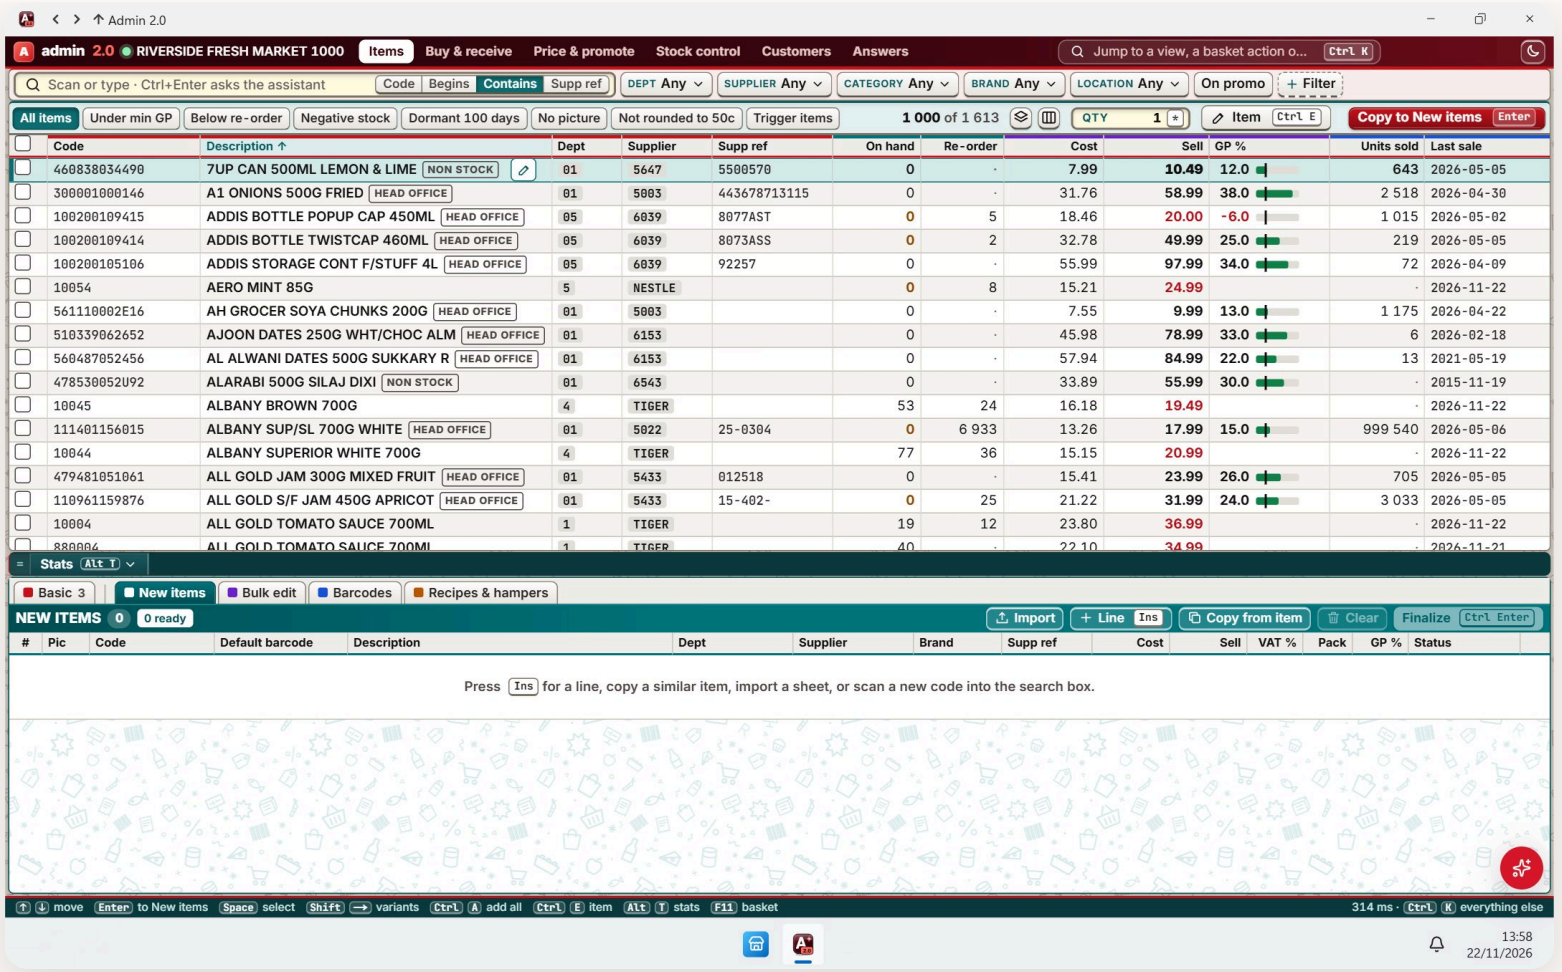

11 A new line

A new line starts from one that's like it. Copy it, type what's different, and the margin works itself out.

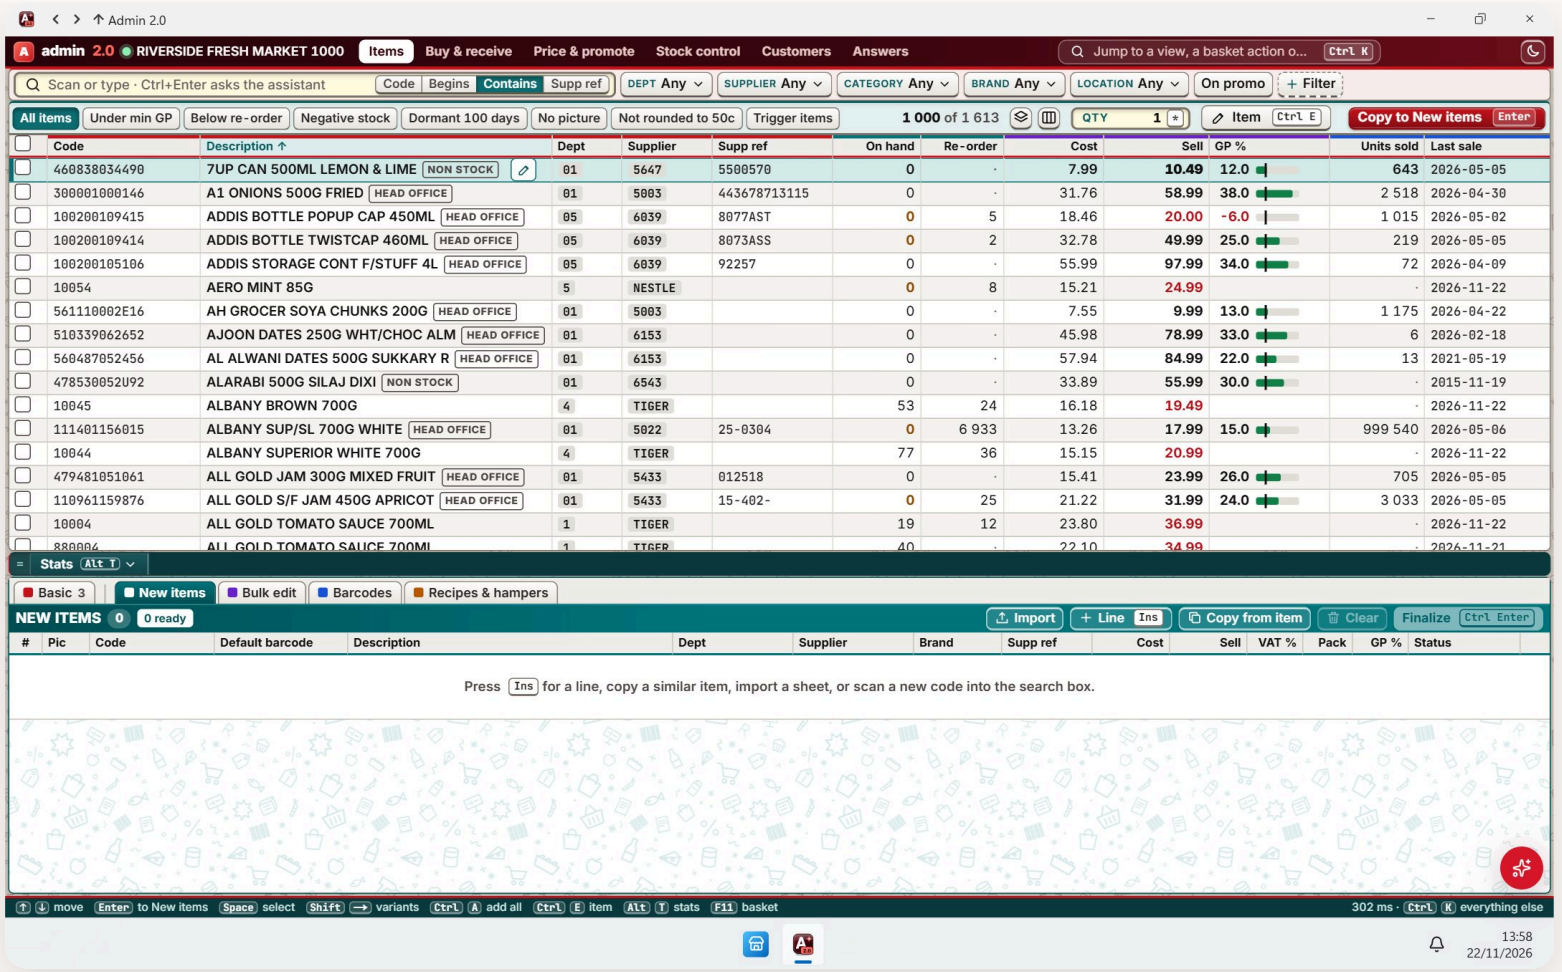

12 More flavours

Drag down for the other flavours, then create them together: already linked as one family.

13 Bulk edit

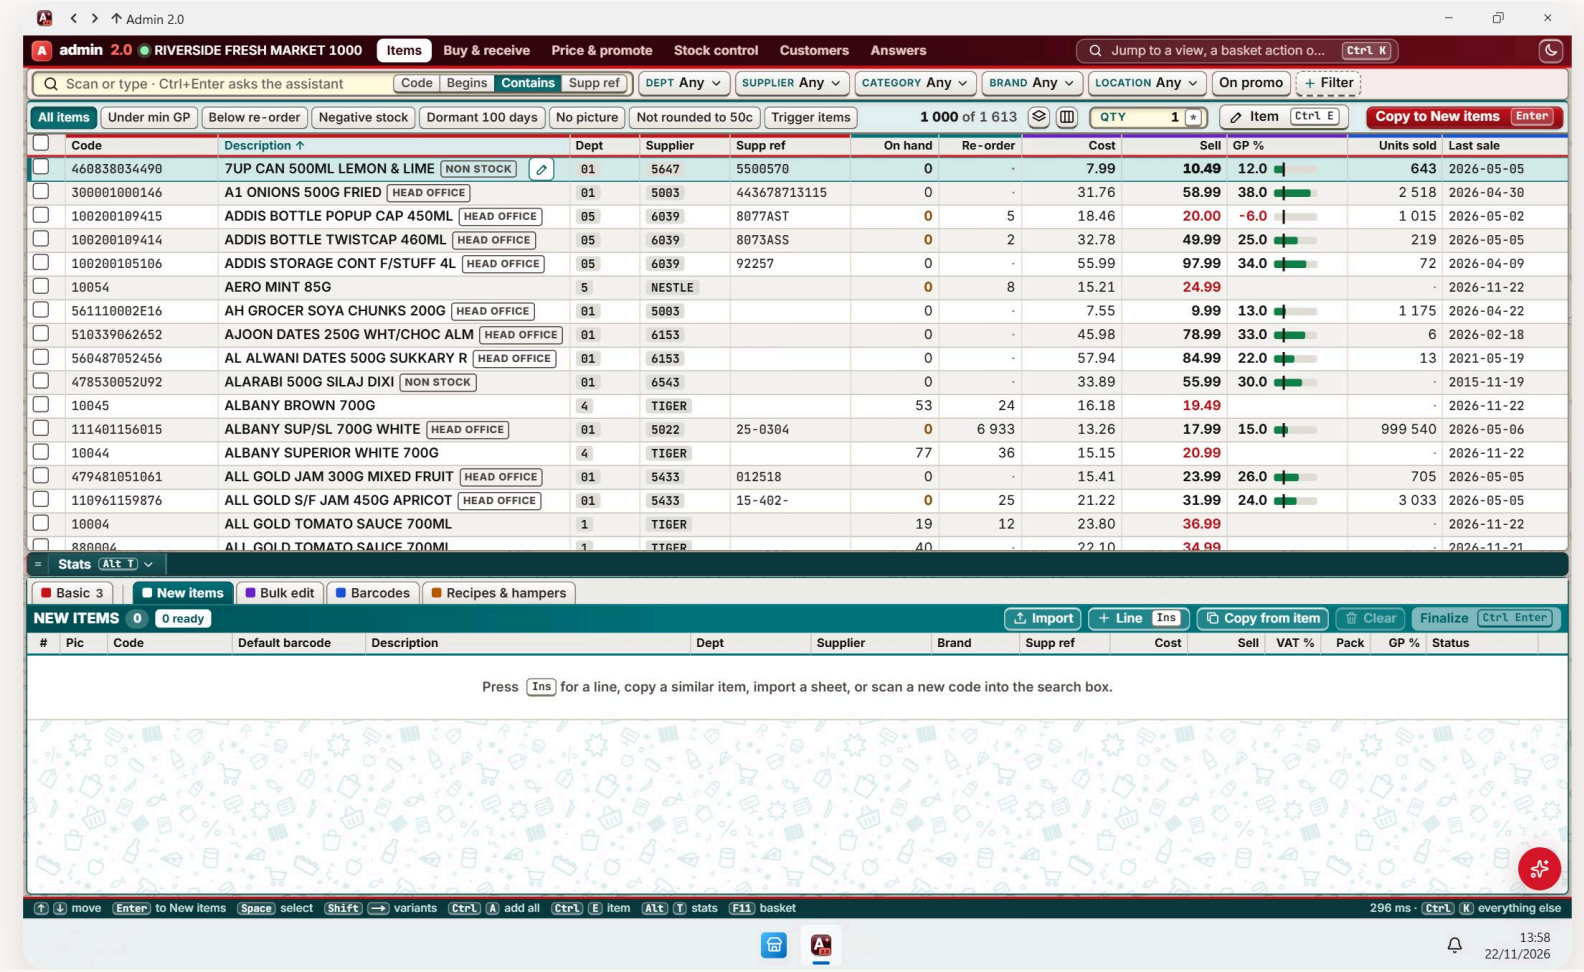

Change a field on a hundred items at once. A rule, a preview of every line, then apply.

14 Its reasoning

It reads the sales, the season, what's on the way and what's on promotion, and writes its reasoning on every line, so you can disagree. Change what you like, and authorise.

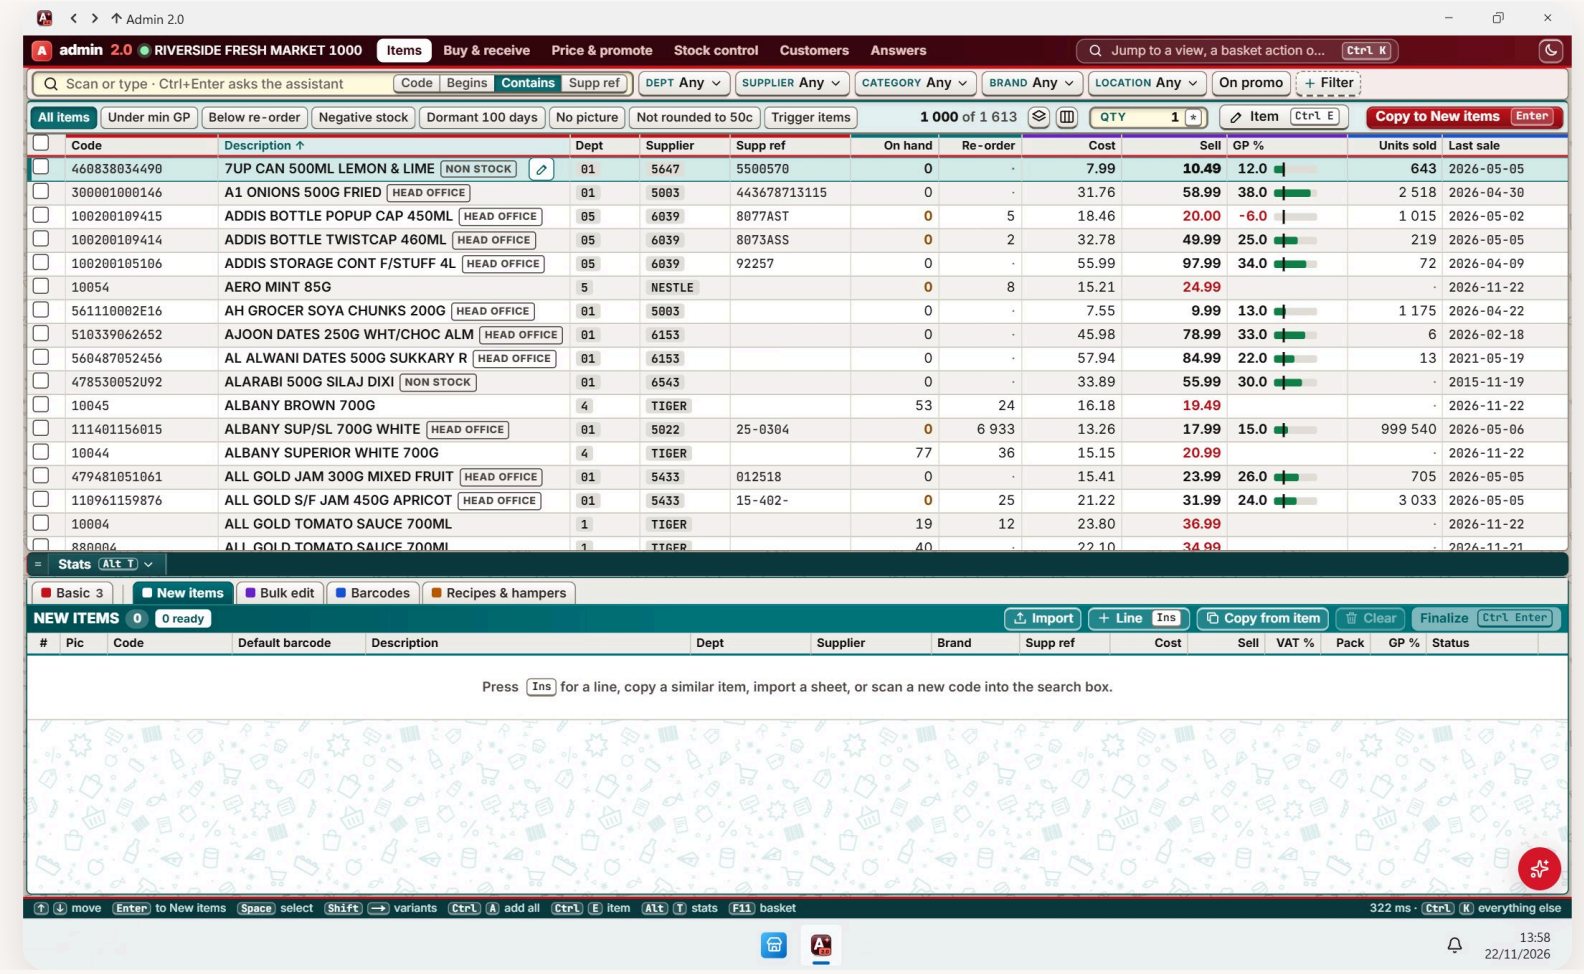

> **Do the Coke order.** Ordering? Say four words. Do the Coke order.

15 It reads it

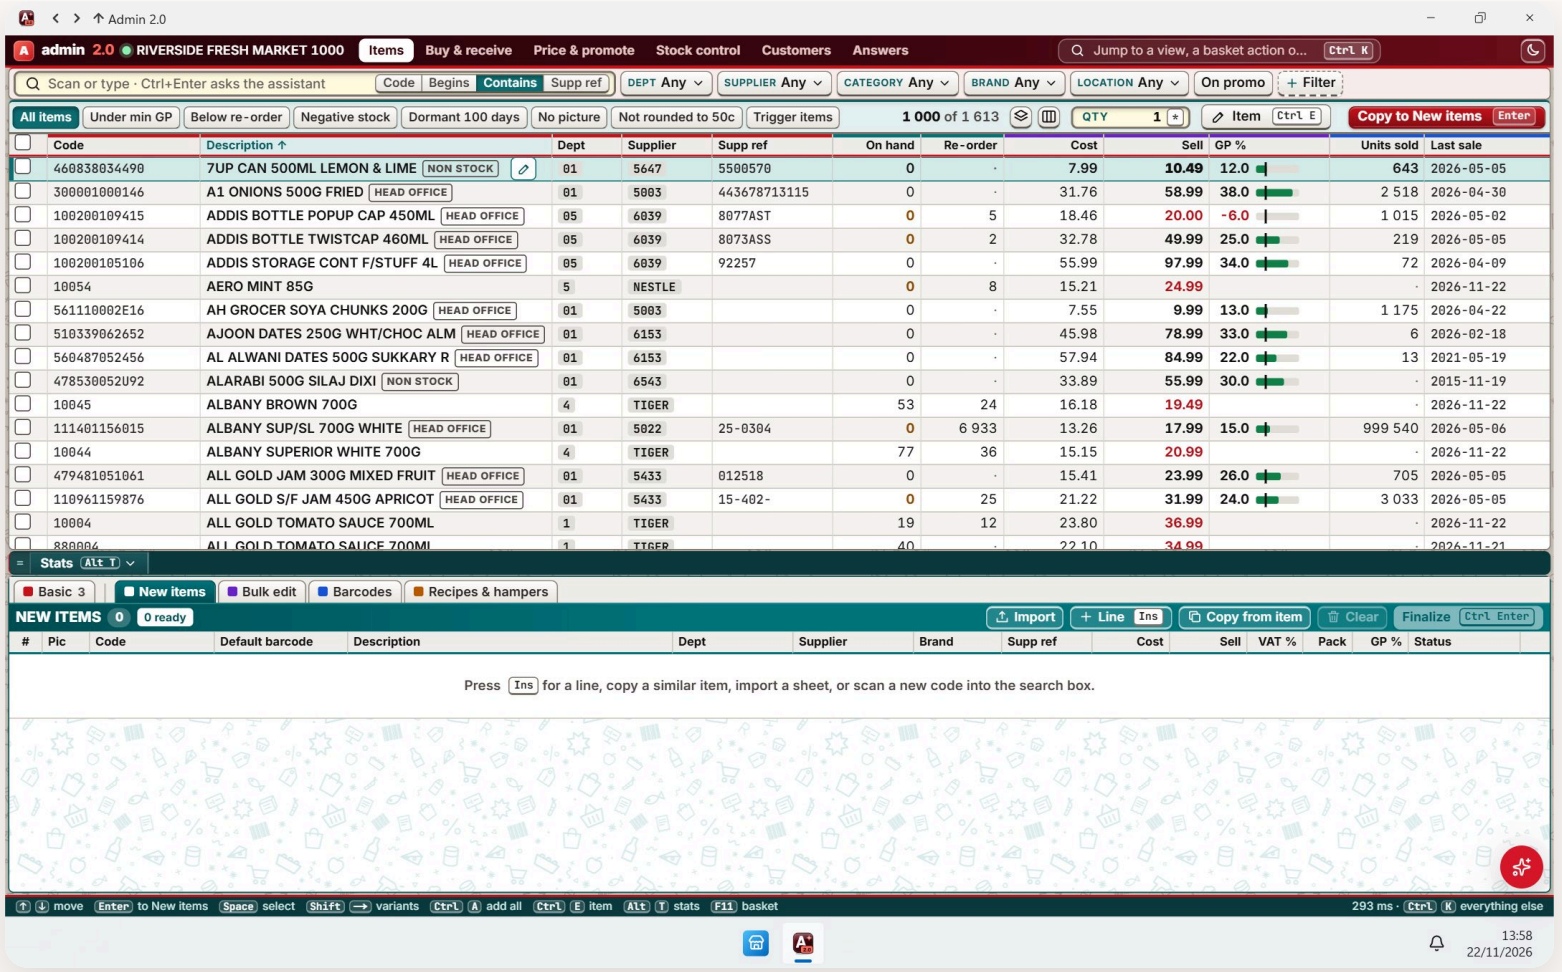

It finds the order and fills the lines as it reads. And it reads what no OCR ever could: the handwriting. A case short, written in by hand, is counted short.

> **A photo of the note.** When the truck arrives, take a photo of the delivery note.

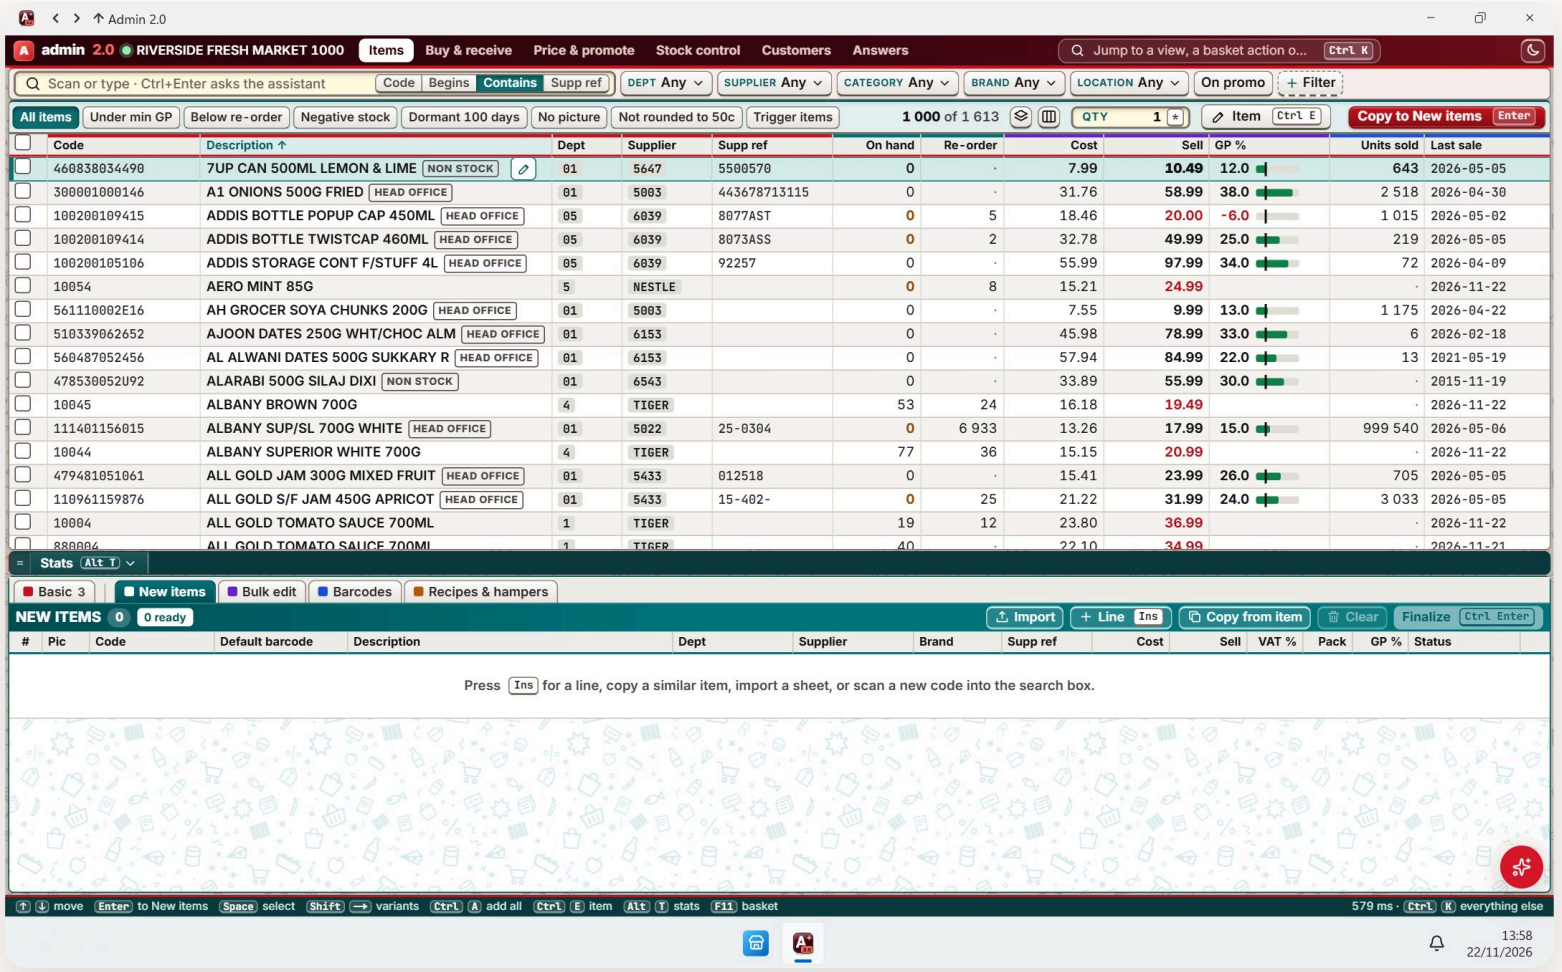

16 Receive and post

One click receives it all. When it's posted, the short case becomes a claim, and the new cost goes straight to repricing.

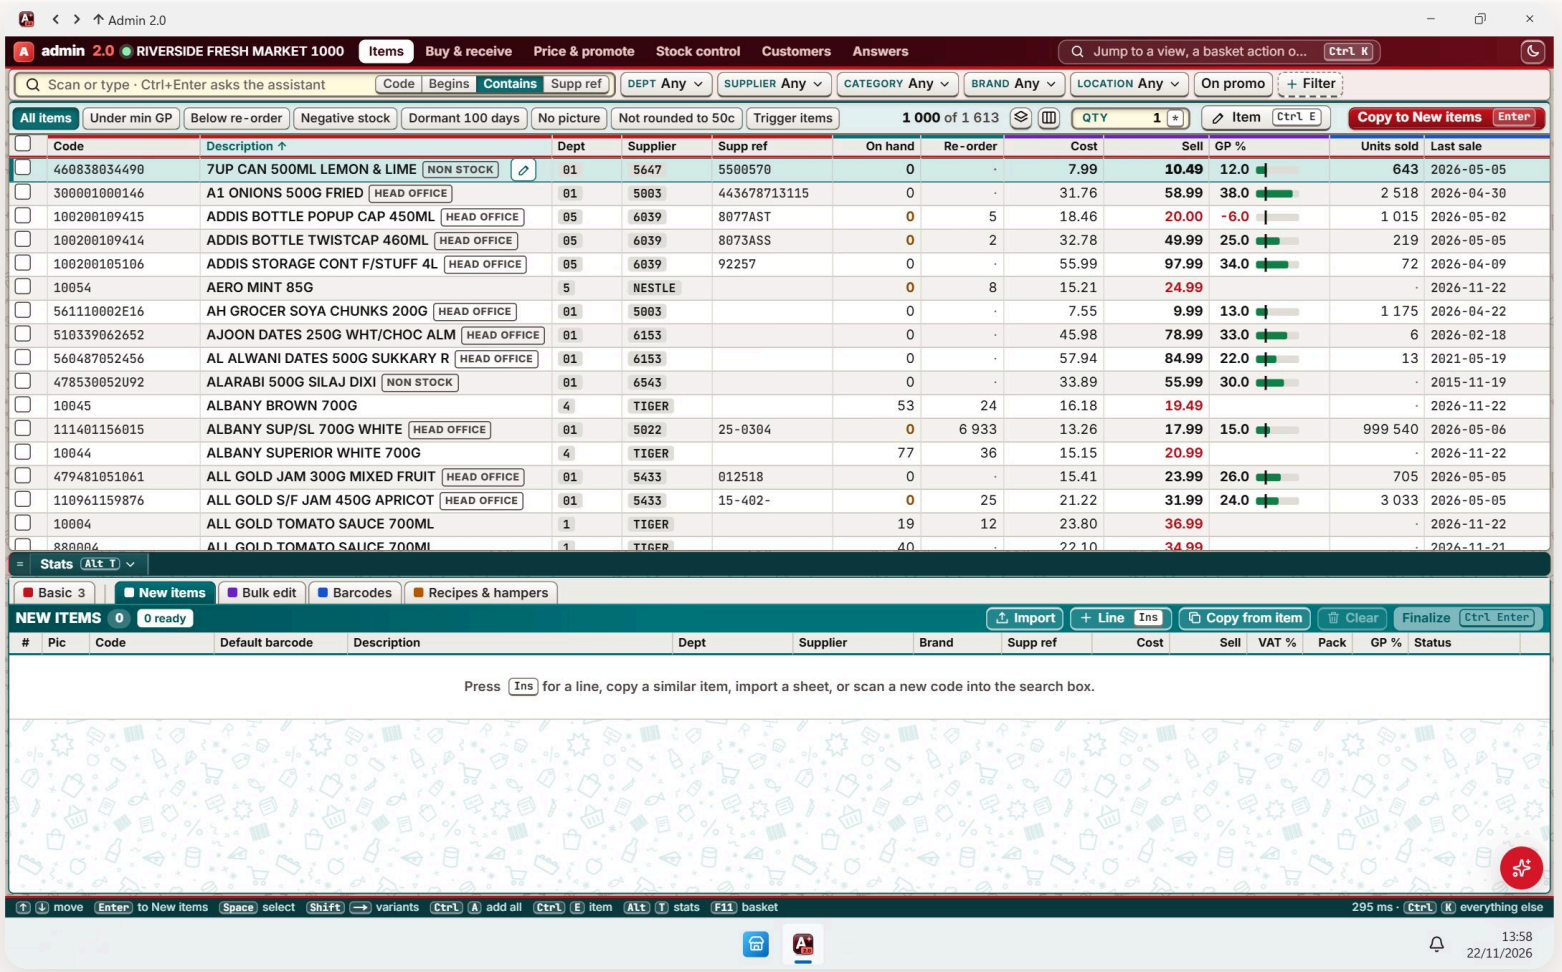

17 Price change

Prices? Set the margin once, and they round themselves to your price points. Three items or three hundred, it's the same few seconds.

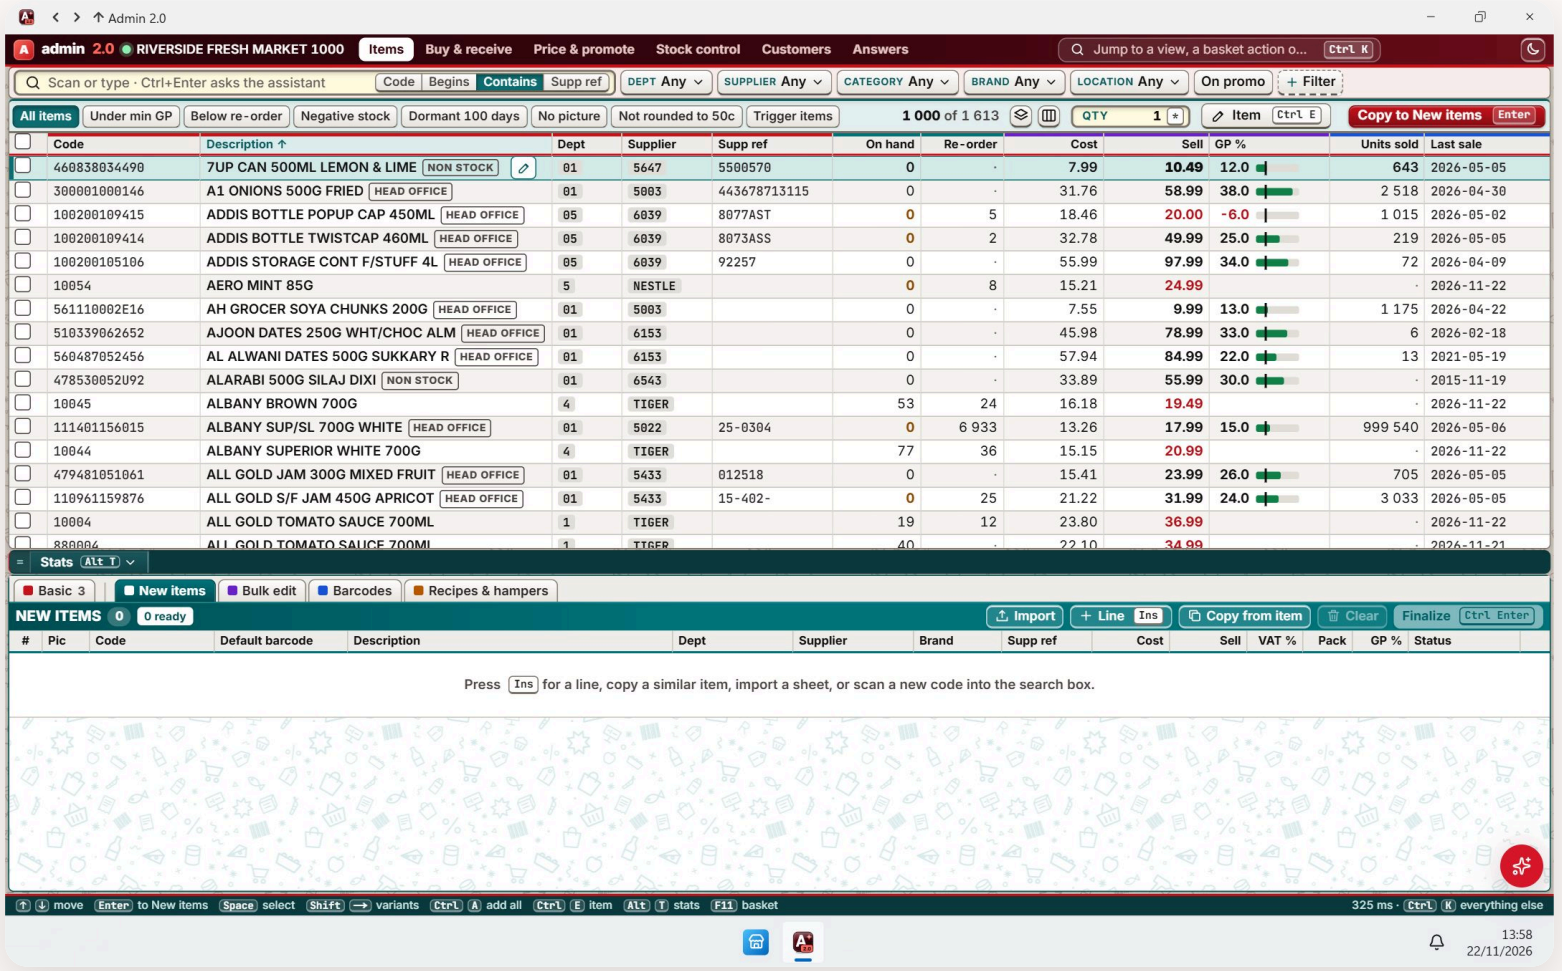

18 Onto labels

Then drag the change onto labels, and the shelf follows.

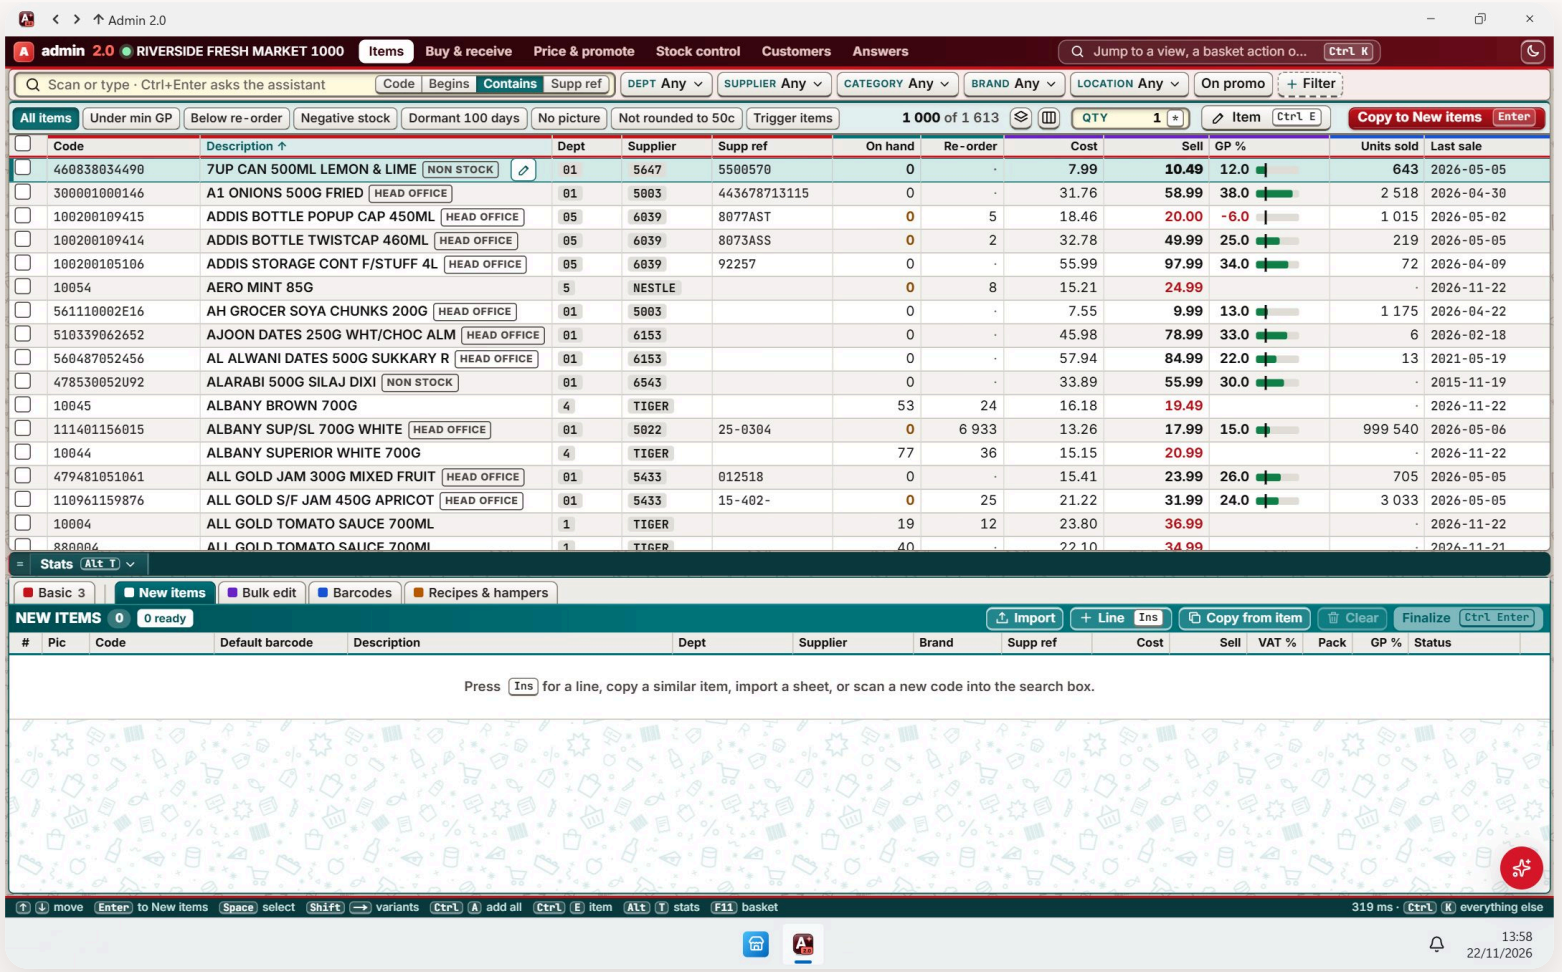

19 Mix and match

Combos the till works out by itself. Pick the kind of deal, drag in the items, and see the till slip before a customer does.

20 Go live

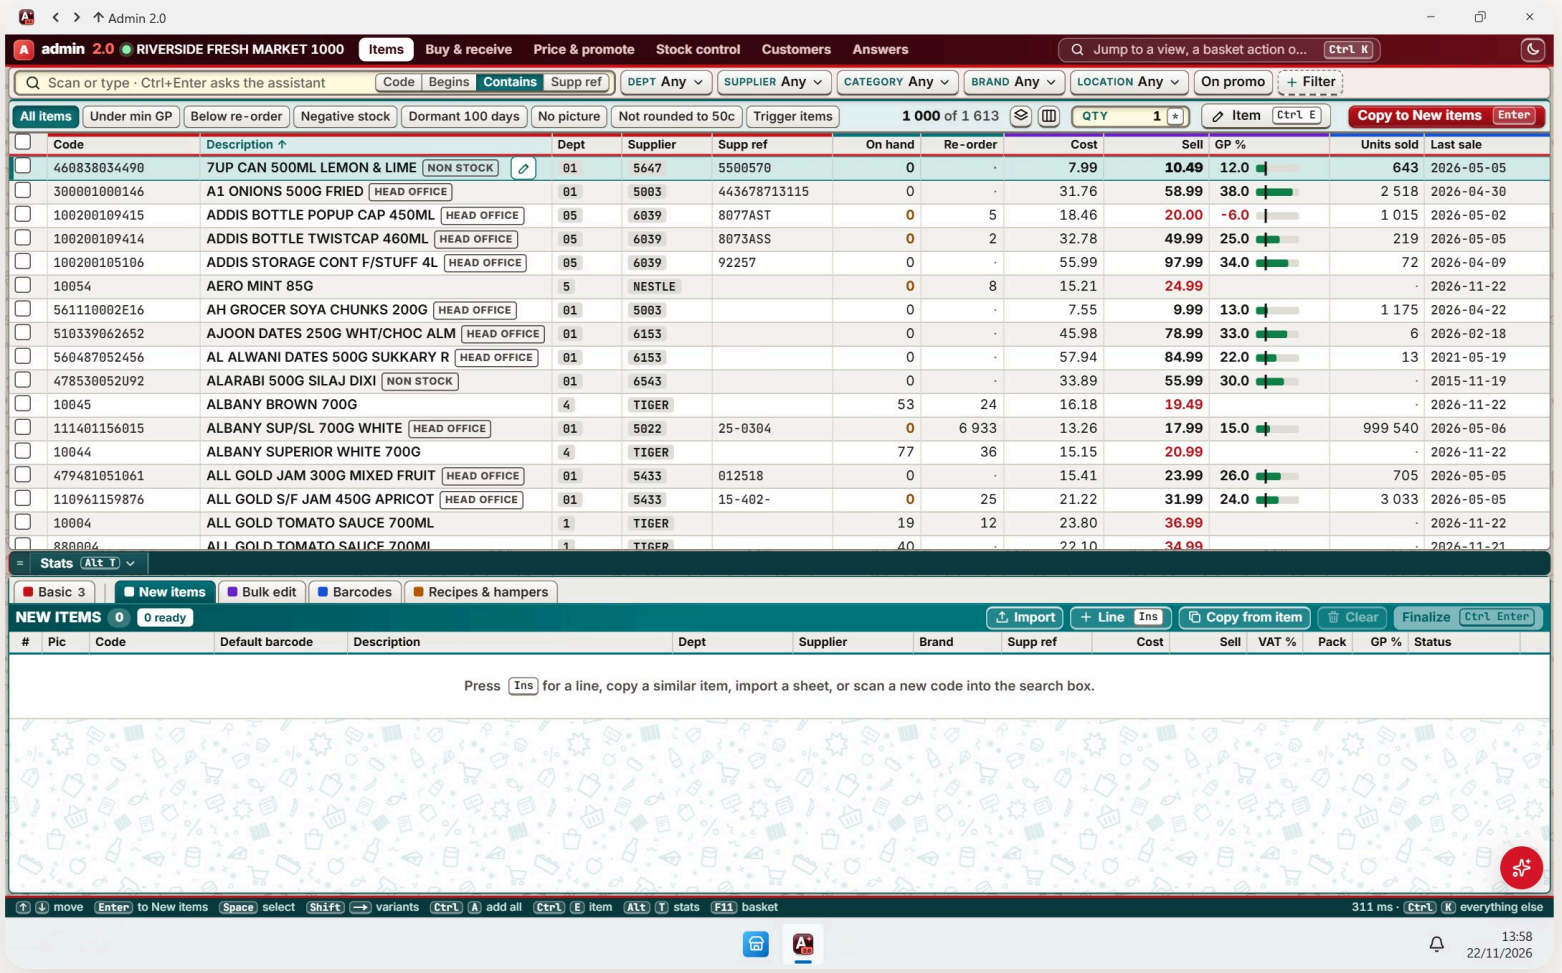

Set the dates and go live. The board shows what's at the till now, what's coming up, and what's still a draft.

21 The answer

Sales, margin, the best seller and the one that slipped, from the same tables as every report you know.

> **Just ask.** Reporting is a question away. How did yesterday go?

22 Every evening

And the reports that matter? Save the view, and it lands in your inbox every evening.
