Head-office stock management for multi-store retail: an overview

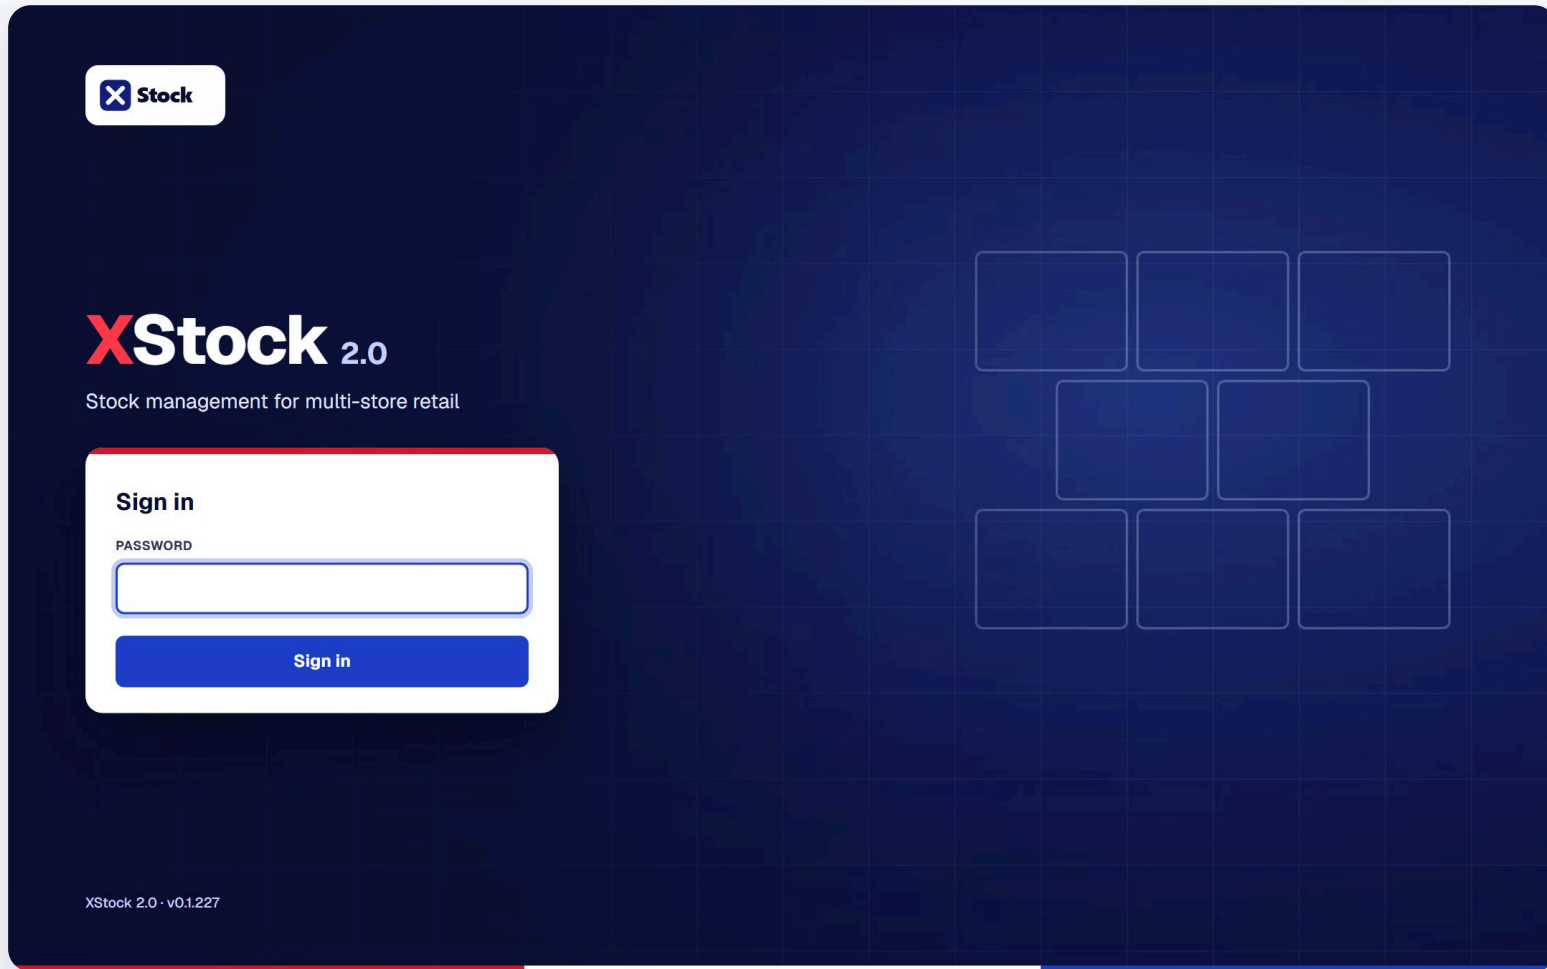

21 October 2026 · Screens shown use a fictitious retail chain and demo data

CAD RETAIL SYSTEMS

## 01 Sign in

Staff sign in with their own password, and what each person can open depends on the roles head office gives them.

The image shows a sign-in interface for XStock 2.0. The background is dark blue with a faint grid pattern. In the top left corner, there is a logo with a white 'X' in a blue square followed by the word 'Stock' in white. The main title 'XStock 2.0' is displayed in large white font, with 'X' in red and 'Stock' in white. Below it, the subtitle 'Stock management for multi-store retail' is in a smaller white font. On the right side, there is a faint, light blue outline of a building or structure. In the center-left, there is a white sign-in box with a red top border. Inside this box, the text 'Sign in' is at the top. Below it, the word 'PASSWORD' is in small capital letters. Underneath is a white password input field with a blue border. At the bottom of the box is a blue button with the text 'Sign in' in white. In the bottom left corner of the screen, the text 'XStock 2.0 · v0.1.227' is visible in small white font.

# 02 Home

The home screen holds the workflows each person uses most. Tiles can be pinned, unpinned and dragged into any order.

# 03 Menu

The menu groups every workflow by area: buying and receiving, stock and logistics, products and pricing, planning, reports, stores and administration. A star pins one to the home screen.

# 04 Purchase orders

Buyers raise purchase orders by supplier and season. The order book shows every order's quantities, what has arrived so far, and where it stands.

# 07 Goods received

Receiving captures what actually arrived, by colour and size. Type a box count and the order's ratio fills in the sizes, and every earlier delivery on the order stays listed underneath.

**Pending GRN.** Check-ins still waiting for their GRN stay on a list of their own, so a delivery sitting at the dock never slips through.

# 08 Distribution

Once stock is received, distribution splits it across the stores. Each distribution moves from draft, to released for packing, to finalised once it has left on the trucks.

Carton box label (101.6 x 127mm) - default

LABEL STOCK (PRINTER)

Box labels: roll 101.6 x 127mm

5 boxes

Preview

Print

In the print dialog: scale 100% (actual size), margins none, headers and footers off. The printer's label size should be 101.6 x 127mm.

## 11 Label designs

Every label is laid out in a designer, to the millimetre, for the label rolls the warehouse uses. A change to a design applies to the next print run.

# 15 Adjustments

Stock adjustments correct what a store or the warehouse has on hand: pick the item, type how many units to add or take off and where they sit, and post it as a docket. Every docket stays on record, with its lines and the reason given.

# 16 Stocktake prep

Before a stocktake, the warehouse builds its boxes from a style's size grid, against the stock it holds: the quantities for one box, and how many boxes are like it. Then it saves them and prints a label for every box.

XStock 2.0

Stocktake Prep

Build boxes for the warehouse stocktake, save them and print their labels.

STYLE

Q Look up

Type a style and press Enter. Then type the quantities for one box (Enter moves to the next size), how many boxes are like it, and Enter again to add it to the list.  
Ctrl+Enter saves the list and opens the labels.

Nothing to save yet.

Save & print

Distributions that don't add up1 over0 short

7 distributions being scanned (boxed in the last 14 days) - 30 ms

Allocated should equal boxed + in a basket + left to scan. Over: more is boxed or left than was allocated, so the store can get too much (for example a box packed for a store that isn't on the distribution). Short: units went missing while some are still left. Lines zeroed on purpose are not counted.

30051 - store 142 - 1 over

18 Dayend

Dayend is the nightly housekeeping run. Every run is kept, with each step's time, its row counts and every statement it ran, so a step that failed can be found, fixed and run again on its own.

**Box fixes.** A fix, such as sending a box to another store, changing its route or removing it, first shows exactly what it will change and what it leaves behind, so the warehouse can check before anything is done.

# 28 Store targets

Store targets are set per period from last year's trading. Type a total or a growth percentage and it spreads across the days the way each store trades.

Store Targets

Set each store's daily sales targets for an accounting period, spread by last year's trading.

13 store(s) not saved yet

Trial mode: you can capture and keep targets here, but SAVE ALL, POST, EMAIL and CLEAR are switched off on this server (demo mode), so no store sees a change.

# 29 Sales dashboard

The sales dashboard follows the takings as they arrive from the stores. Yesterday's view shows every store against its target and last year, with the period to date alongside and the totals up top.

# 30 At a glance

At a glance turns the same numbers into today's pace against target and last year, a short list of what needs attention, and a wall of every store, coloured by how it is trading.

**Drill-downs.** Double-click a store, an area or a department for its best sellers, then open a style to see which stores sold it and how it is selling through since it arrived.

**Warehouse.** On the right, head office sees what the warehouse packed and dispatched and by whom, stock checked in at the dock, laybys, and the share of card sales on PayFlex.

# 31 Merch dashboard

The merch dashboard ranks each department's top thirty styles by units sold, with what the warehouse has sent and the sell-through, plus the winners of the last thirty days for the same department.

## 32 Reporting

Reporting answers a question asked in plain words with the right report from the library, ready to filter, chart, export or save as a dashboard. Favourite reports stay on the left, one click away.

# 33 Store Map

The store map shows every store and whether head office can reach it right now. Stores that are down queue up on the right, longest outage first, with how long each has been off.

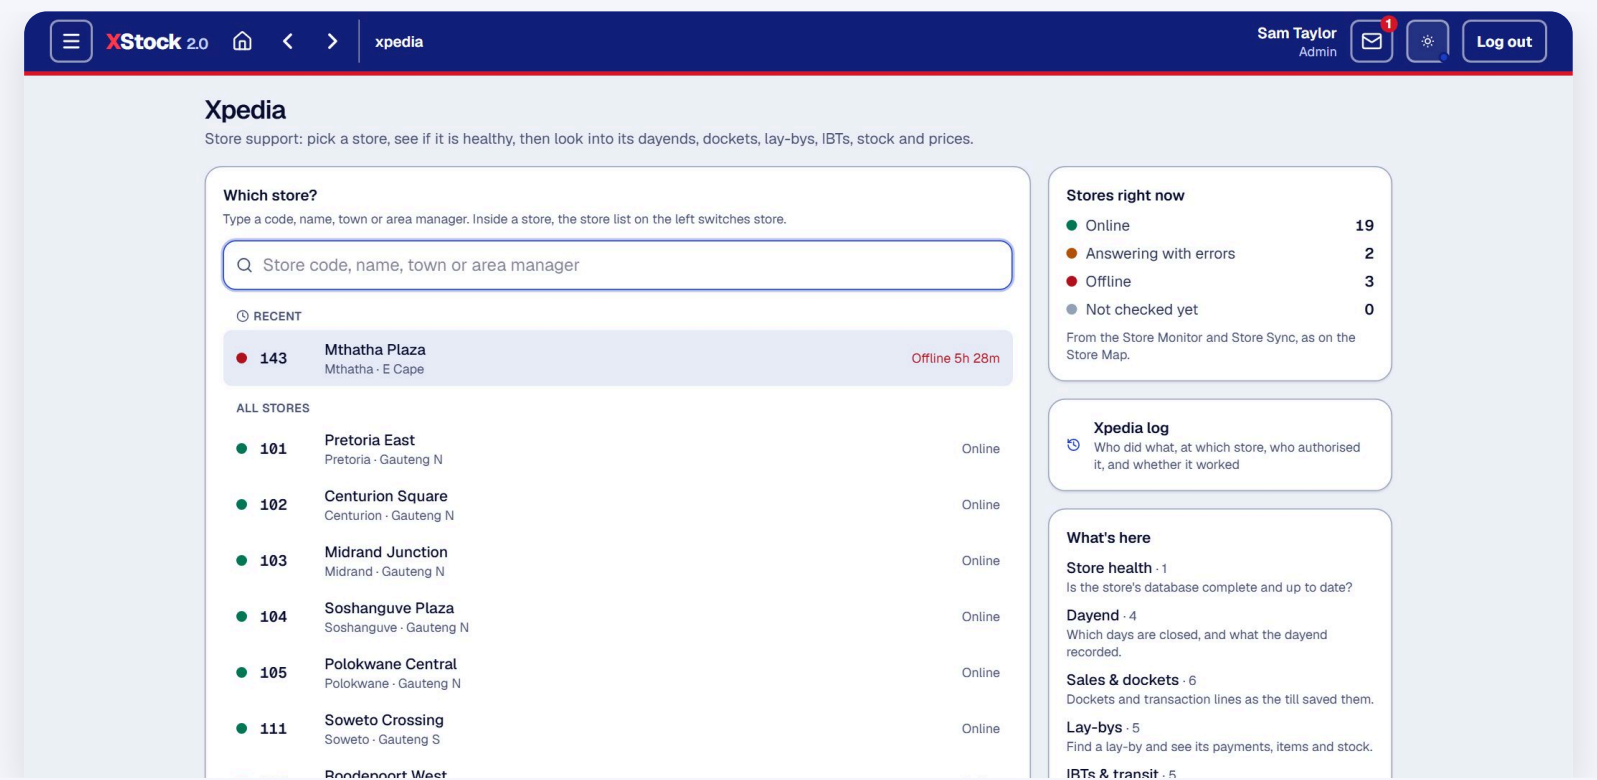

# 34 Xpedia

Xpedia is the support desk's window into a store: its health, dayends, sales, lay-bys, IBTs, stock and prices, with fixes for the problems stores phone in about. Support starts by finding the store.

**Map views.** The list groups stores by province, area manager, status or database version. For the screen on the support office wall, the map can show where outages cluster as a heat map, full screen.

**Store Monitor.** Opening a store shows what the monitor sees: when it last answered, how quickly, the error it gives, and its uptime over the last day and week, with every change in its history.

# 35 Offline stores

This store is offline, so the tools that read its server are locked until it answers. Head office's side still works, such as the IBTs on their way to the store.

Tools for this store

What do you need to do? (old Xpedia name)

Everything Look up Fix

Dayend

Which days are closed, and what the dayend recorded.

LOOK UP

Dayend status

Days still waiting for a dayend, and the last dayend the till recorded.

FIX

Missing dayend record

Adds the dayend record for a day that was traded and closed but left none, with the right transmission number.

Retire old transmission numbers

Marks sales older than two years as old, so they don't mix with this cycle's transmission numbers.

Wrong trading date

Moves a day that was saved under the wrong date (a till clock) to the correct date, with its dayend.

IBTs & transit

Stock moving between head office and stores.

LOOK UP

Where is my IBT?

Follow one IBT from head office to the store's receipt, item by item.

Sales & dockets

Dockets and transaction lines as the till saved them.

LOOK UP

Recent dockets

The latest dockets saved at the store, newest first.

Docket lookup

One docket: its header, tender and every line.

Transactions by date and time

Every item line in a period, with docket totals by type.

FIX

Airtime: check and fix a day

Compares the airtime the till sold with the airtime in the day's takings, and posts it when it is missing.

Till says docket number already used

When every sale stops with 'document number has previously been used', moves the till's docket counter past the numbers in use.

Move a docket to another date

Moves one docket and its lines to the trading date it should be on.

Lay-bys

Find a lay-by and see its payments, items and stock.

LOOK UP

Find a lay-by

Search lay-bys by contract number, customer name, cell or ID number.

Lay-by detail

One contract: balance, every payment docket, the items and their lay-by stock.

FIX

Lay-by payment not reflecting

Takes in payments the customer made that the lay-by never picked up, and pays it up when that was the last one.

Restore missing lay-bys

Brings back lay-bys the store lost, from head office's copy: one, or every open one of the last 4 months.

Force a lay-by's state

Sets a lay-by to open, paid up or cancelled when the till didn't, with a reason that stays on record.

Stock & items

Item file, stock history and variance.

LOOK UP

Dayend stock variance

Which items made a day's stock count go over or short, worked out the way the till does.

Pricing & promotions

What the till will charge, and why.

LOOK UP

Store pricing health

How many items are marked down, on a date-driven price or an AMM coupon today.

# 38 Redirects

When a store is closed or offline, an IBT can be redirected to another store. Every redirect is logged, and a separate list catches store IBTs that never reached the queue.

2 IBOs not in transit

Store IBOs head office has (sheet\_merge) that aren't in the transit queue, so they are never sent. Dayend copies only the last 7 days' IBOs; one that missed it shows here.

# 39 Milking

Milking pulls every store's sales up to head office through the day, then checks overnight that both sides match. Each day shows how many stores are complete, and only real problems ask for attention.

40 XMail

XMail carries messages between head office and the stores. Stores read them on the till, and anything they send back lands in the head-office inbox.

**Store detail.** Opening a store shows two weeks of its sales and transactions, day by day, with the row counts and values on both sides, what was done about any difference, and a button to pull a day again.

# 41 Delivery

Every message sent shows which stores have received it, when, and on which till. Stores still waiting stand out, so head office knows exactly who to follow up with.

# 42 Store Sync

Store Sync follows everything head office sends to the stores: promotions, price changes, settings and departments. Each kind shows what is applied, what is still on its way and what needs attention, and which stores are behind.

**New message.** A new message can go to single stores, to head-office people, or to groups such as every store in a region. Groups are kept in the phonebook, and the till shows the message exactly as it is written here.

# 43 Where it went

After a change is sent to the stores, head office sees exactly where it went: what was sent and what it replaced, which stores applied it and when, which are still trying, and why a store is stuck.

RECORD CHANGE #85002

Setting: New slip footer for the summer sale

By STAYLOR on 19/10/2026 12:56 · 22/24 stores applied

Retry now

Resend to all stores

What was sent

| MFIELD         | MVALUE                                                     | CHANGE | HEAD OFFICE HAD                         |
|----------------|------------------------------------------------------------|--------|-----------------------------------------|
| receipt_footer | Summer sale starts Friday. Thank you for shopping with us! | Set    | mValue: Thank you for shopping with us! |

A newer change to the same row wins: if this change is re-sent after a newer one, the store keeps the newer value.

# 44 Retry rules

Head office decides how hard to keep trying: how many tries, how long to wait between them, and how long to keep at an offline store. The rules are spelt out in plain words.

XStock 2.0

↕ Store Sync > settings

Sam TaylorAdmin

1

Log out

Retry rules

How the server keeps sending to a store that didn't get it, and when it stops. This runs on the server whether anyone has a page open or not.

TRIES BEFORE GIVING UP

12

 tries

For a store that answers but the send fails (for example a table missing at the store).

FIRST WAIT BETWEEN TRIES

2

 minutes

It doubles after each try...

LONGEST WAIT BETWEEN TRIES

30

 minutes

...but never waits longer than this.

KEEP TRYING AN OFFLINE STORE FOR

96

 hours

A store that can't be reached (offline, line down). 0 = for as long as the item runs.

AFTER GIVING UP, TRY AGAIN EVERY

12

 hours

0 = never by itself; only when someone presses Retry.

Save rules

In plain words

A store whose send fails is tried 12 times, then marked Failed. Waits between tries: 2 minutes, 4 minutes, 8 minutes, 16 minutes, 30 minutes ... An offline store is tried for 96 hours, then marked Failed. After giving up, it's tried again every 12 hours while the item runs.

A store that refuses the login, or needs a newer XPOS, isn't retried over and over; it's marked straight away so someone can fix it, then picked up by the "try again every" rule or by Retry.

A circular logo for the South African Government, featuring the national flag and the text "SOUTH AFRICAN GOVERNMENT" and "REPUBLIC OF SOUTH AFRICA".

# 45 Telegram Reports

Through the day, area managers get an interim sales report on Telegram: each store's takings against target and last year. Head office sees which stores did not answer, who gets each region's report, and when.

# 49 Temporary access

Sign-ins come only from the approved office networks. For a stock take or a late shift, one person gets a time-limited exception, without changing the rules for their whole role.

Access Control

Configure which login roles are restricted, permitted working hours, and the approved IP whitelist.

🔒

User Class Rules

Unrestricted roles may sign in at any time, from anywhere. Restricted roles must satisfy the working-hours schedule below, and can only connect from the IP whitelist unless External Access is granted. A role with no explicit rule defaults to restricted, no external access, cannot manage.

| ROLE            | TIME RESTRICTED                     | EXTERNAL ACCESS                     | CAN MANAGE                          | EFFECTIVE ACCESS                      |

# 51 Audit log

The audit log records every purchase order and goods received action: who did it, when, and what was entered. Search by person or order, and even the attempts that failed are kept, with the reason.

**Module rights.** Pick a role to see the modules it opens and the people who hold it. Each module is switched on or off for a role with one click, and new users are created here too.

# 52 Scanners

On the warehouse floor, staff work from handheld scanners. The scanner menu has two jobs: build boxes of stock for the stores, and confirm boxes onto the truck.

# 53 Box Creator

To pack, a picker chooses a released distribution and a store, and the scanner shows exactly what that store still needs. Each item scanned goes into the open box, and closing the box prints its label.

# 54 Box Confirmer

At the loading bay, the loader picks a route and scans each box label as it goes onto the truck. The scanner shows which stores on the route still have boxes waiting, and what has been loaded today.
